ILLUMITRADE®

— ILT® 2026 GUIDE · FULL EDITION

Master the ILT® method.

The complete reference — setup, alerts, multi-timeframe reading and every core strategy for ILT® V1, 2.0, 2+ and the Add-on.

Setup | Alerts | V1 & 2.0 strategies | Risk management

INTRODUCTION

Read it. Understand it. Apply it.

Read this guide, understand the conditions and apply the ILT® indicators properly — and you'll trade like the top 5%. New here? Start with the 15-minute Quick Start.

PART 1 · SETUP

Install the indicators 04

Know ILT® V1 09

Know ILT® 2.0 10

Read the dashboards 11

Your multi-timeframe workspace 12

PART 2 · ALERTS

ILT® V1 alerts 14

ILT® 2.0 alerts 16

Fixing loading errors 17

PART 3 · STRATEGIES

ILT® V1 — open & close 18

Reading the timeframes 20

ILT® 2.0 — signals & zones 21

Catching tops & bottoms 23

Risk management 27

V1 vs 2.0 28

PART 4 · EXTRA TOOLS

Add-on · MTF Trend Lines 29

ILT® 2+ divergences 30

Mastery, cheat sheet & help 31

ILT® · ALL RIGHTS RESERVED 2026

GLOSSARY

The words you'll see everywhere.

ILT® V1

GCL	**Gradient Colored Line** — the main line. Low = loading up; high with a negative slope = exhausted.
CL	**Colored Line** — direction. Aqua = long bias, Fuchsia = short bias.
CROSS LINE	Dots trailing the GCL — crossing them triggers a trade.
BLUE BOX	**Aqua Area** — the reset / accumulation zone.
◆AQUA	Aqua Diamonds — a setup is forming.
◆FUCHSIA	Fuchsia Diamonds — exhaustion, local top or bottom.

ILT® 2.0 · GENERAL

CL2	Oscillates around the 0 Line. Above = bullish, below = bearish.
TL2	Smoothed CL2 — trend direction and strength.
RISKY ZONE	Black area at the top · ≈ +27 / +28.5 — potential top.
SAFE ZONE	Black area at the bottom · ≈ −27 / −28.5 — potential bottom.
HTF / LTF	Higher / lower timeframes.
MTF	Multi-timeframe — reading several timeframes together.

ILT® · ALL RIGHTS RESERVED 2026

PART 1 · SETUP

Install the indicators.

1 **Log in to TradingView**

Go to tradingview.com and sign in. No account? Click **Sign up** — the free plan covers most features.

2 **Open a chart**

Click **Chart** in the top menu and load any asset — a stock, a forex pair, crypto.

3 **Open the Indicators menu**

Click **Indicators, Metrics & Strategies** (the `fx` icon) in the top toolbar.

4 **Add the 3 ILT® indicators**

Invite-only scripts → ILT® V1 2026, ILT® 2.0 2026 and ILT® Add-on 2026. Optional: **ILT® 2+**.

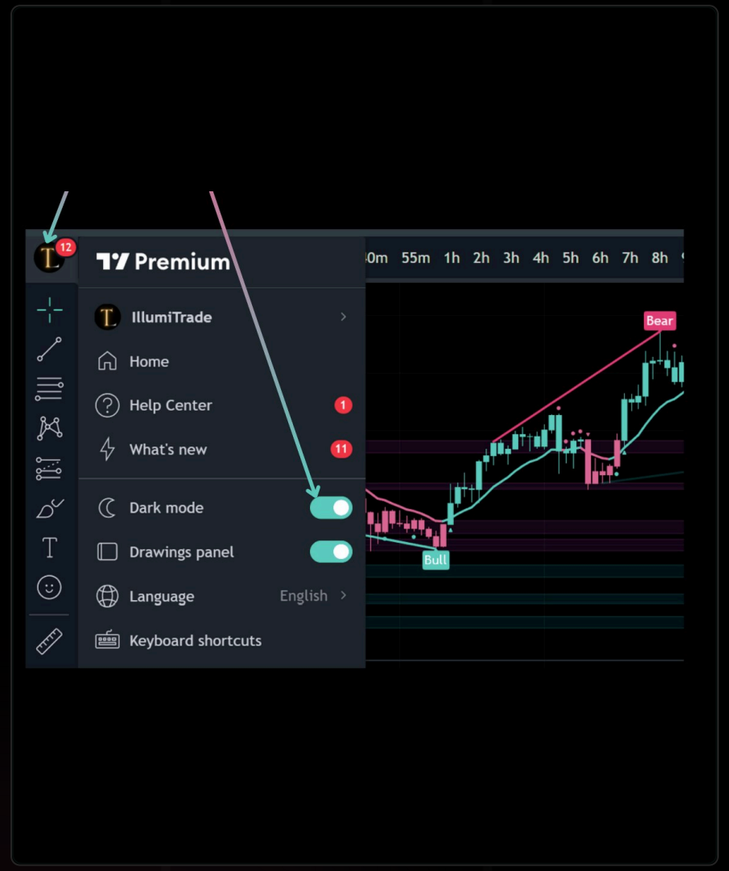

Indicators menu → Invite-only scripts.

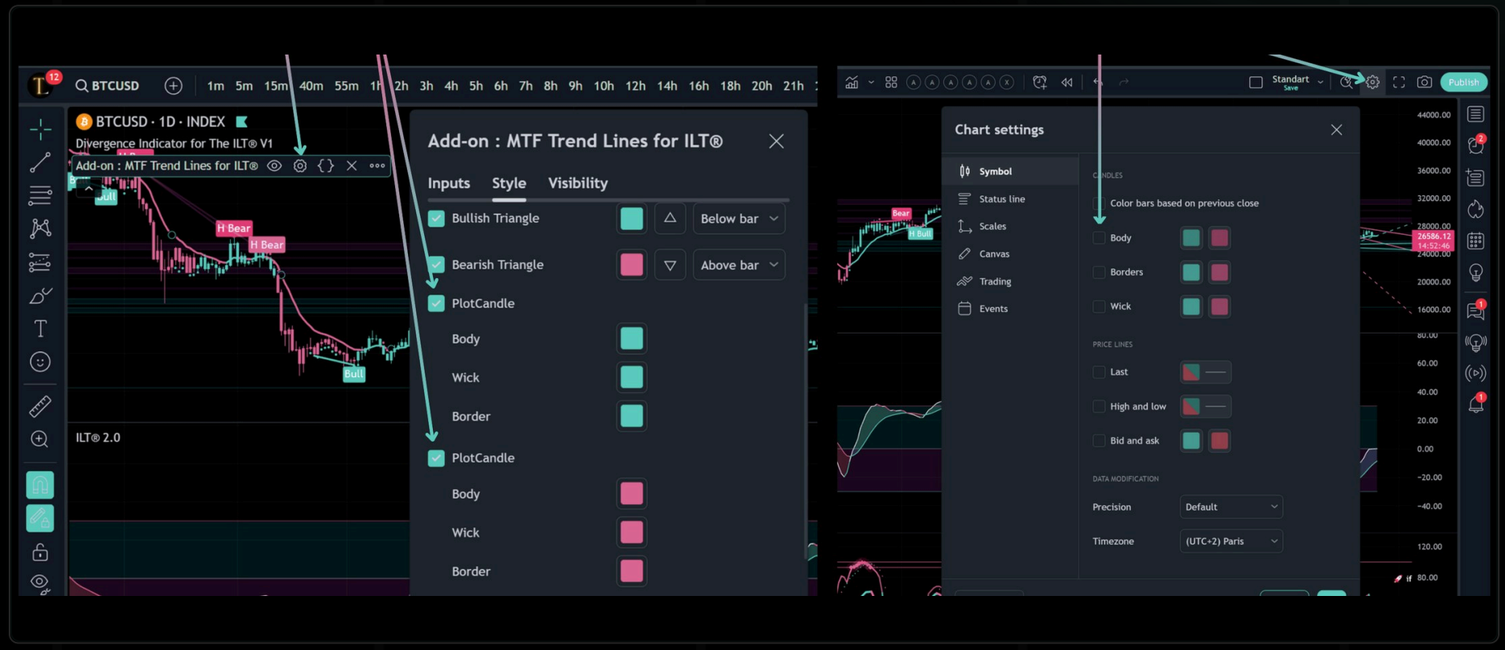

ILT® · ALL RIGHTS RESERVED 2026

PART 1 · SETUP

Dark mode & bar colours.

Dark mode — clean candle and line visibility.

Optional — match the ILT® 2.0 bar colours.

OPTIONAL · ILT® 2.0 BAR COLOURS

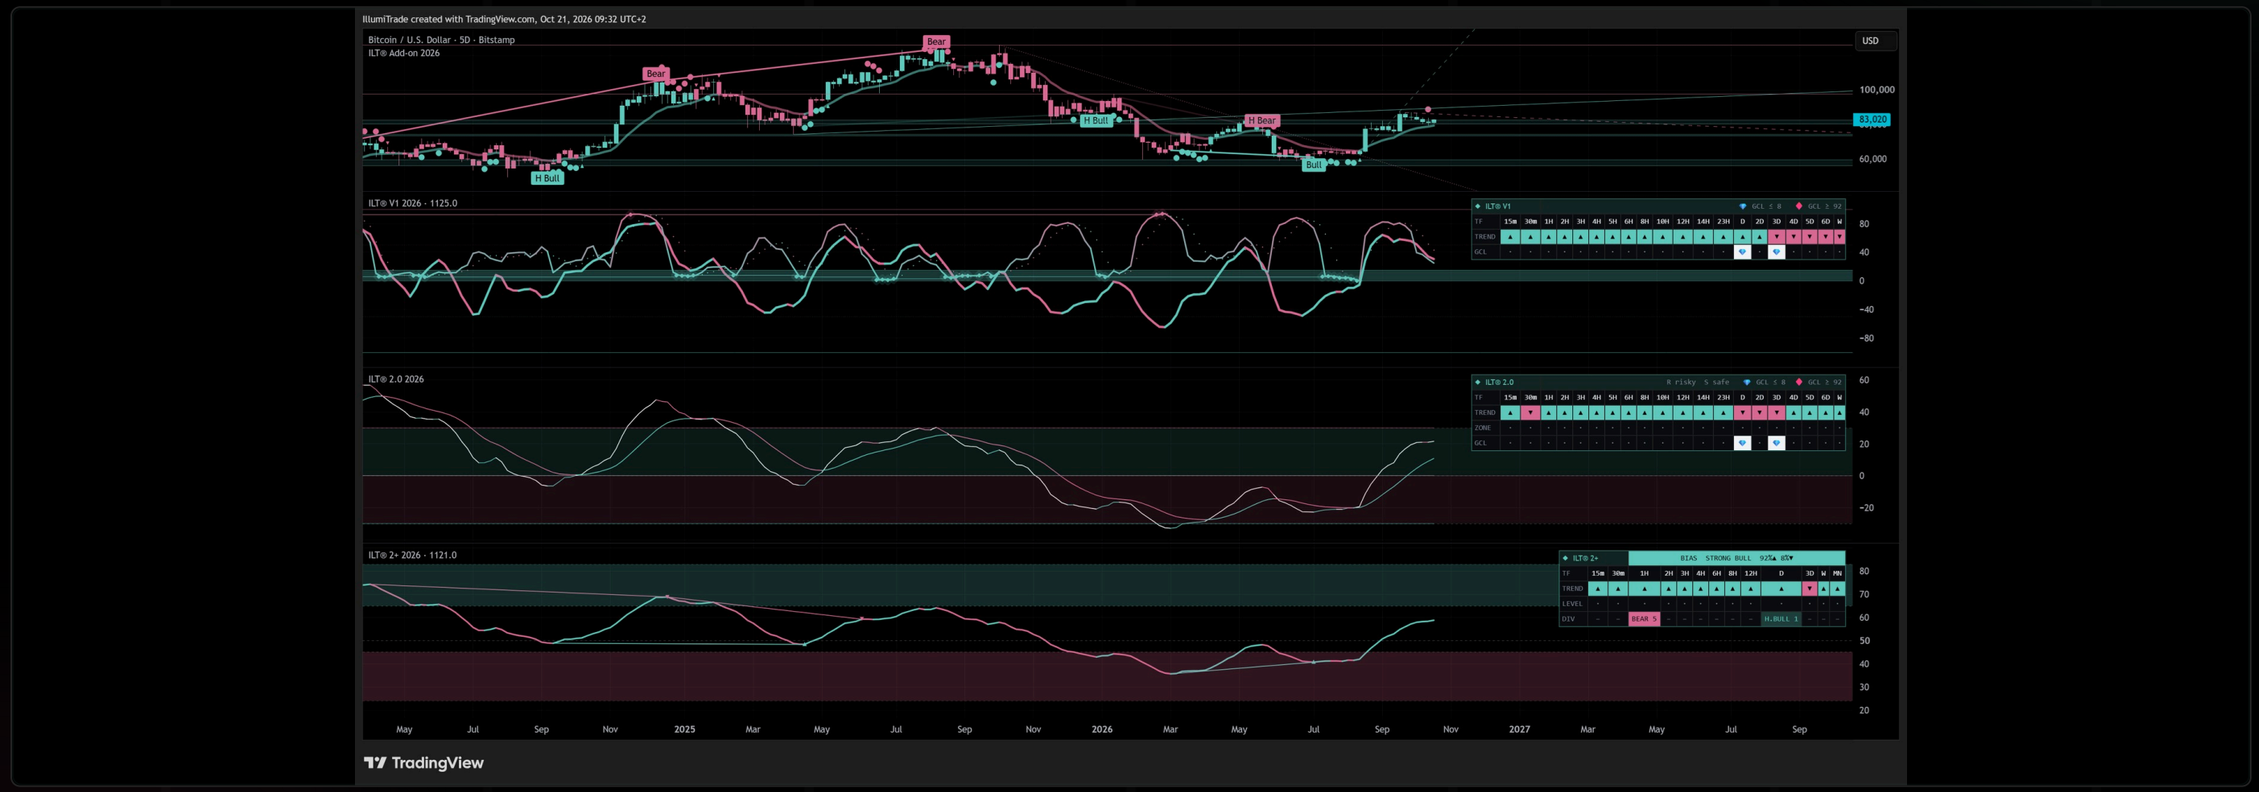

In the Add-on settings keep both **PlotCandle** boxes **checked**, then in the chart settings **uncheck Body, Borders and Wick**.

ILT® · ALL RIGHTS RESERVED 2026

PART 1 · SETUP

Your chart, fully set up.

This is what you should see once all your ILT® indicators are loaded.

From top to bottom — price with the Add-on trend lines, ILT® V1, ILT® 2.0 and the optional ILT® 2+ · **Right** — the multi-timeframe dashboards.

ILT® · ALL RIGHTS RESERVED 2026

PART 1 · SETUP

Save it as a template.

Templates apply the same indicators and settings instantly, so every chart you open is ready to read.

STEP 1

Templates icon

In the top toolbar, next to the indicators button.

STEP 2

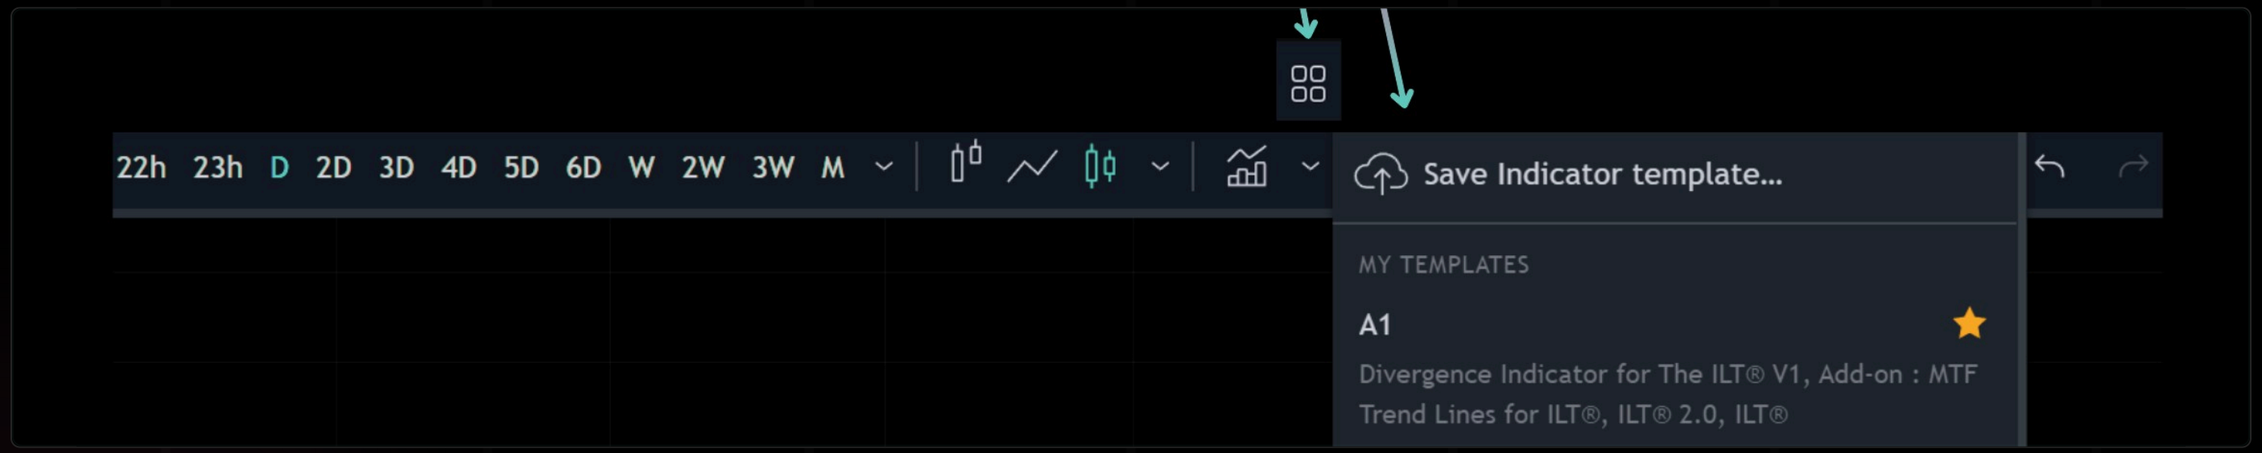

Save Indicator template…

Name it **"A1"**.

STEP 3

One click, any chart

All your ILT® indicators now load in one click.

`Save Indicator template` → name it A1.

ILT® · ALL RIGHTS RESERVED 2026

PART 1 · SETUP

The main template.

Your daily view: switch timeframes in one click and see what's happening across multiple timeframes (MTF).

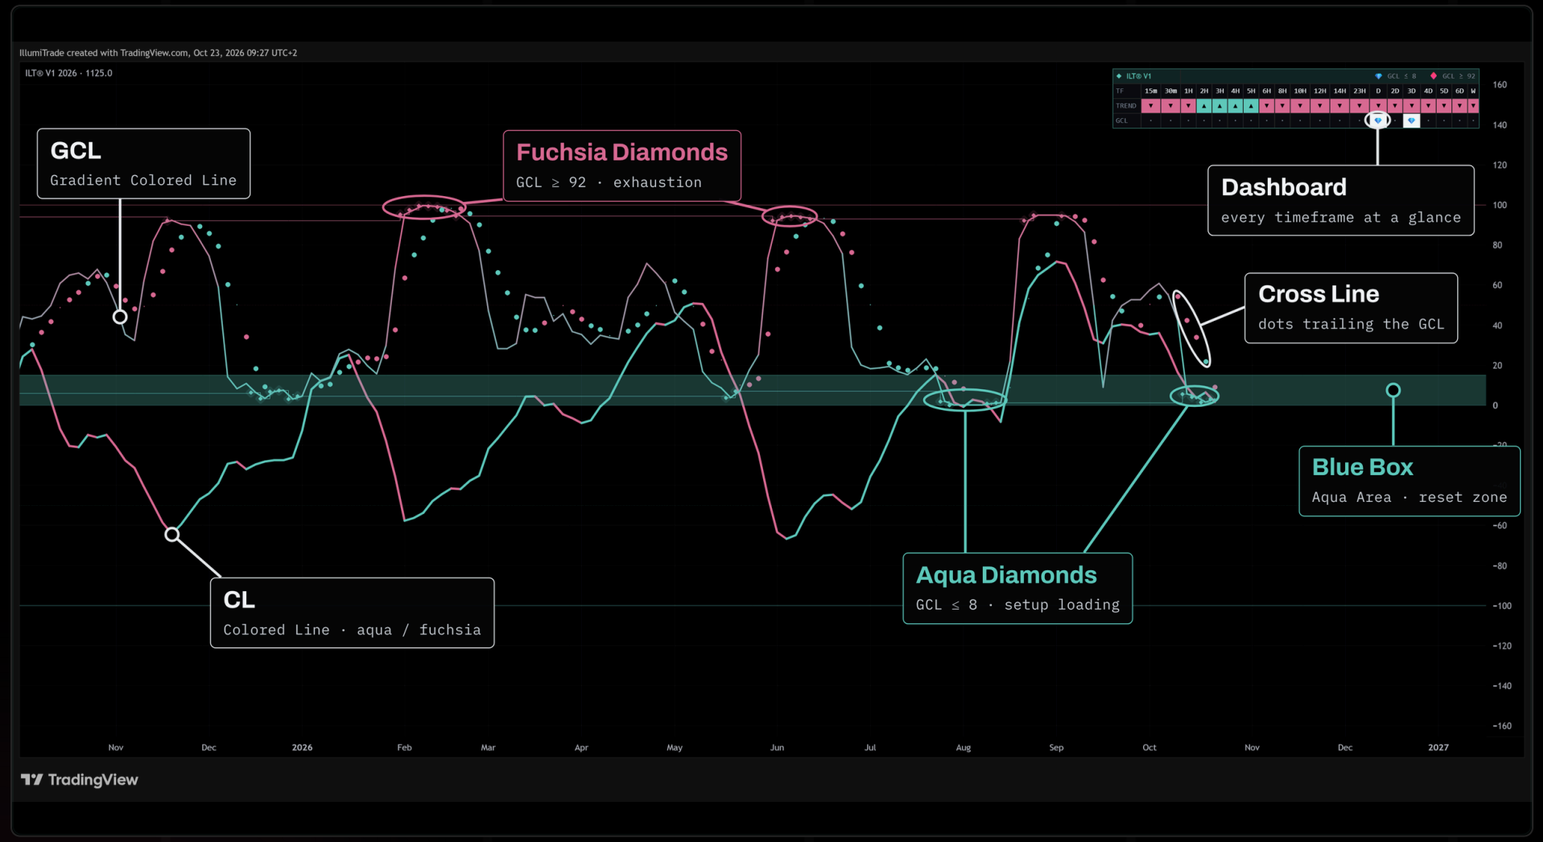

Click the timeframe bar to add new timeframes. ILT® 2.0 sits above ILT® V1; the dashboards summarise every timeframe at a glance.

ILT® · ALL RIGHTS RESERVED 2026

PART 1 · SETUP

Know ILT® V1.

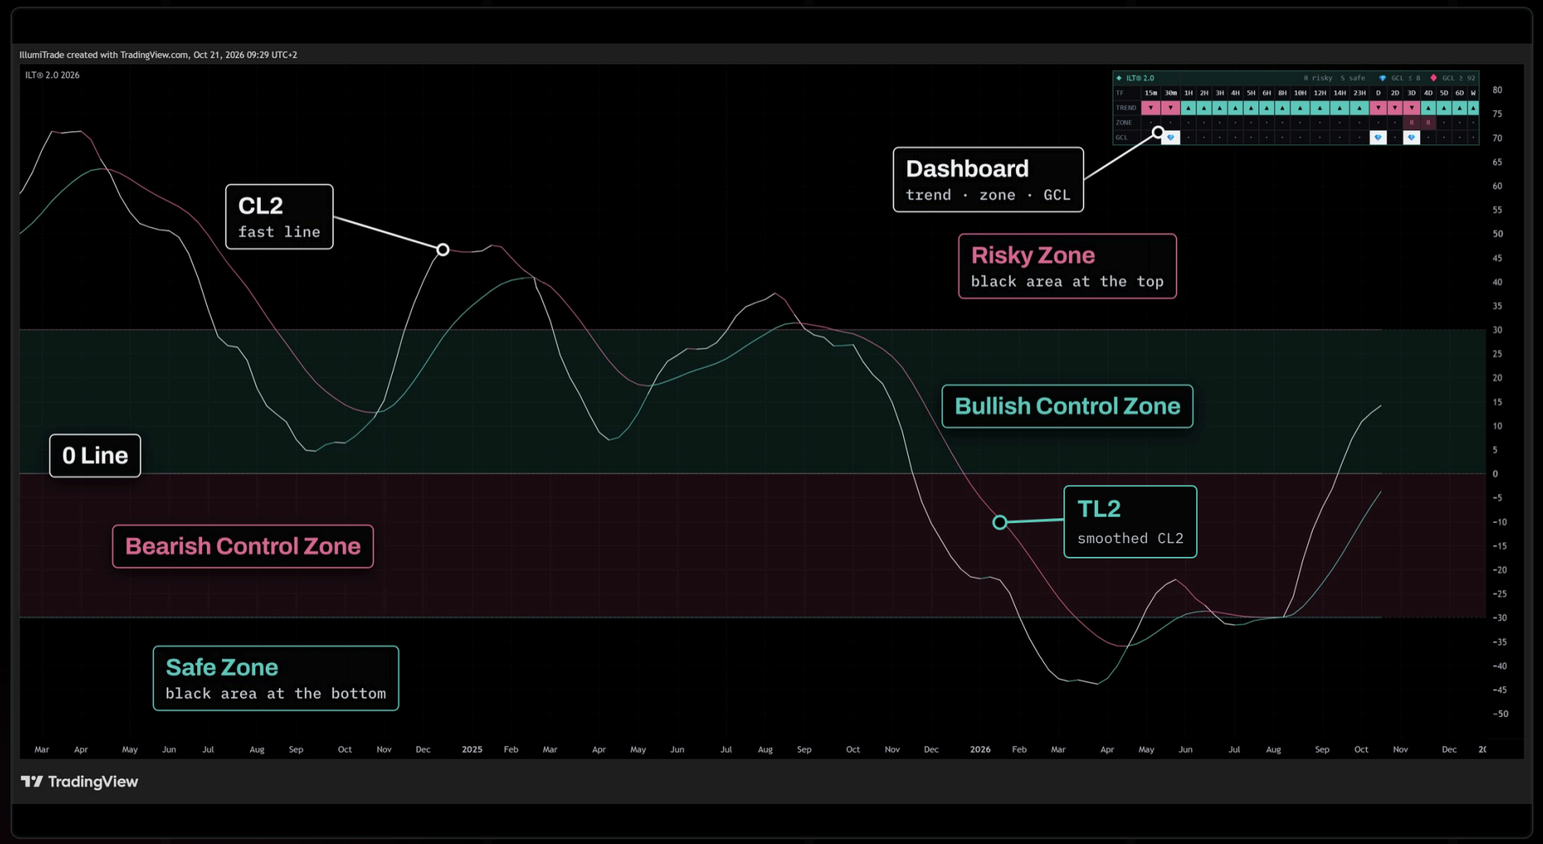

ILT® V1 on a real chart — the key elements labelled.

GCL	The main line. Reset low = loading up.
CL	Colored Line — Aqua long bias, Fuchsia short bias.
CROSS LINE	The dots trailing the GCL — the GCL crossing them is the trigger.
BLUE BOX	Aqua Area — reset / accumulation zone.
◆ AQUA	GCL ≤ 8 — setup forming, potential entry.
◆ FUCHSIA	GCL ≥ 92 — exhaustion, local top or bottom.

ILT® · ALL RIGHTS RESERVED 2026

PART 1 · SETUP

Know ILT® 2.0.

ILT® 2.0 — CL2, TL2, the 0 Line, the control zones and the extreme zones.

CL2	Above 0 = bullish, below 0 = bearish.
TL2	Smoothed CL2 — trend direction & strength.
BULLISH ZONE	Bullish Control Zone.
BEARISH ZONE	Bearish Control Zone.
RISKY ZONE	Black area at the top (≈ +27 / +28.5) — potential top.
SAFE ZONE	Black area at the bottom (≈ −27 / −28.5) — potential bottom.

ILT® · ALL RIGHTS RESERVED 2026

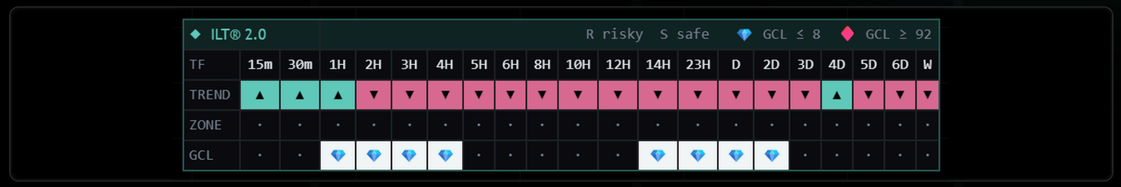

PART 1 · SETUP

Read the dashboard in 5 seconds.

Both indicators show a dashboard on the right of the chart: one column per timeframe, from 15m to W.

ILT® V1 dashboard

ILT® 2.0 dashboard — adds the ZONE row.

ROW

TF

The timeframe of each column, short to long.

ROW

TREND

▲ aqua = bullish · ▼ fuchsia = bearish on that timeframe.

ROW · 2.0

ZONE

R = Risky Zone · S = Safe Zone.

ROW

GCL

◆ = GCL reset, a setup is loading · ◆ = GCL at the top, exhausted.

HOW TO USE IT

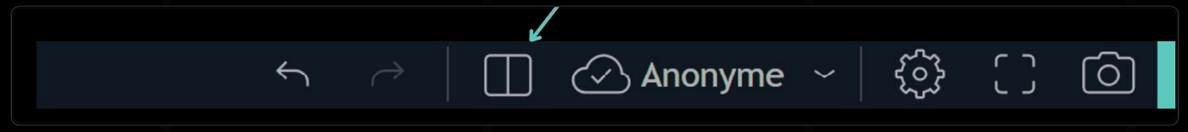

Look for ◆ **stacking across several timeframes** — the more columns, the stronger the setup. Then apply the golden rule: trade in the direction the **higher-timeframe TREND** shows.

ILT® · ALL RIGHTS RESERVED 2026

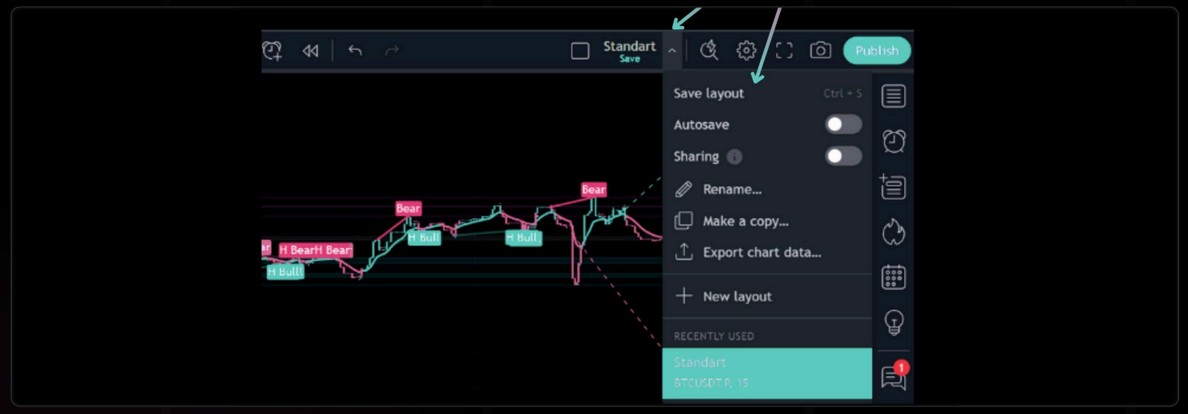

PART 1 · SETUP

Your multi-timeframe workspace.

Split your screen to watch several timeframes at once, then save each layout.

Split screen — the layout button in the top toolbar.

Save layout — keep each setup one click away.

8 LAYOUTS	INDICATORS · TIMEFRAMES
OVERVIEW	All versions · 23H
SCALP*	2.0 only · 1m · 5m · 15m
ENTRIES	2.0 only · 15m · 1H · 4H
LOW TF	V1 + 2.0 · 40m · 55m · 90m
MID TF #1	V1 + 2.0 · 2H · 5H · 10H
MID TF #2	V1 + 2.0 · 14H · 20H · 23H
HIGH TF #1	V1 + 2.0 · D · 2D · 3D
HIGH TF #2	V1 + 2.0 · 5D · 1W · 3W

*Optional — useful for high-leverage trading. Same asset, every horizon, no switching back and forth: faster decisions, better context, less emotional trading.

ILT® · ALL RIGHTS RESERVED 2026

PART 1 · SETUP

Workspace pro tips.

TIP 1

Open everything automatically

Set your browser to reopen your saved layouts at launch — every major browser supports it (search *"open a set of pages on startup"* for yours). You get a **zero-friction market overview** every morning.

TIP 2

Try unconventional timeframes

Instead of 1H try **55m**, instead of 2H try **90m**, 4H → **6H**, Daily → **23H**, Weekly → **6D**. They can reveal **hidden setups** the common timeframes don't show. Some require a paid TradingView plan — optional, but worth testing.

ILT® · ALL RIGHTS RESERVED 2026

PART 2 · ALERTS

ILT® V1 alerts: the early warning.

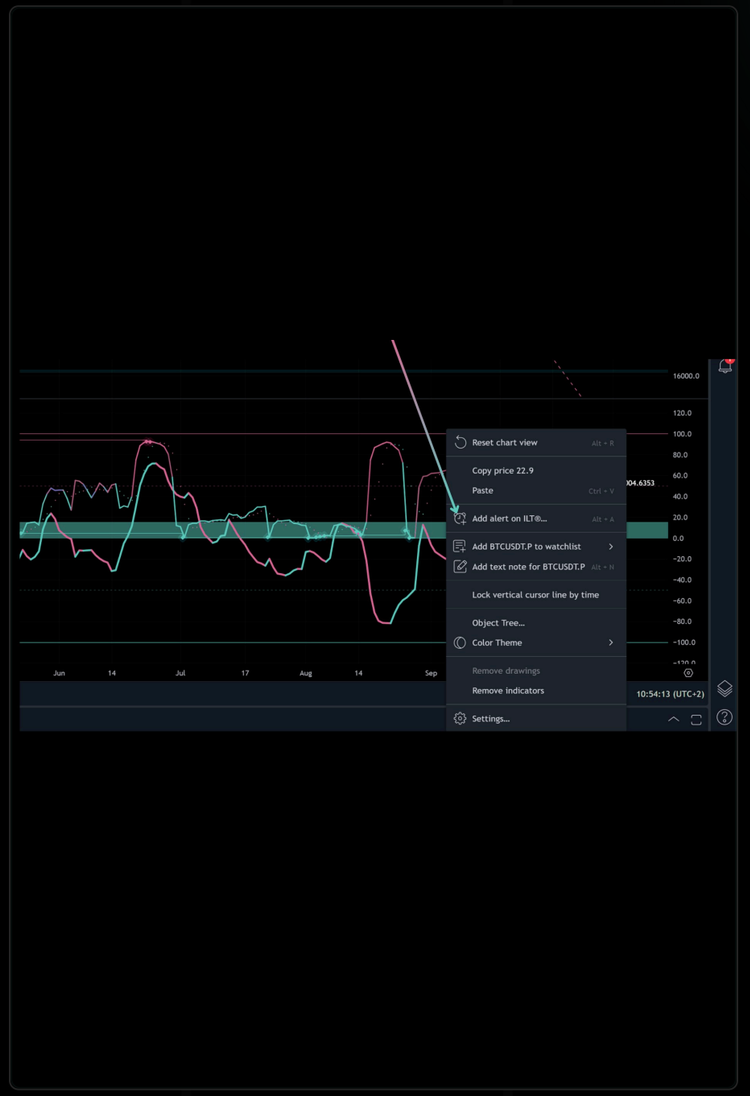

An alert fires the moment the GCL drops below 4 — before significant moves. Stricter than the ◆ (≤ 8) on purpose: only the deepest resets alert you.

1 **Right-click ILT® V1 2026**
Select **Add alert on ILT® V1 2026**.

2 **Use these settings**
Condition: **ILT® V1** · **Less Than** · Value **4**.

3 **Trigger & expiration**
Once Per Bar · **Open-ended alert**. Other settings as you wish.

4 **Repeat per timeframe**
One alert per timeframe and chart you trade — see the next page.

Right-click the indicator.

Settings · Less Than · 4.

ILT® · ALL RIGHTS RESERVED 2026

PART 2 · ALERTS

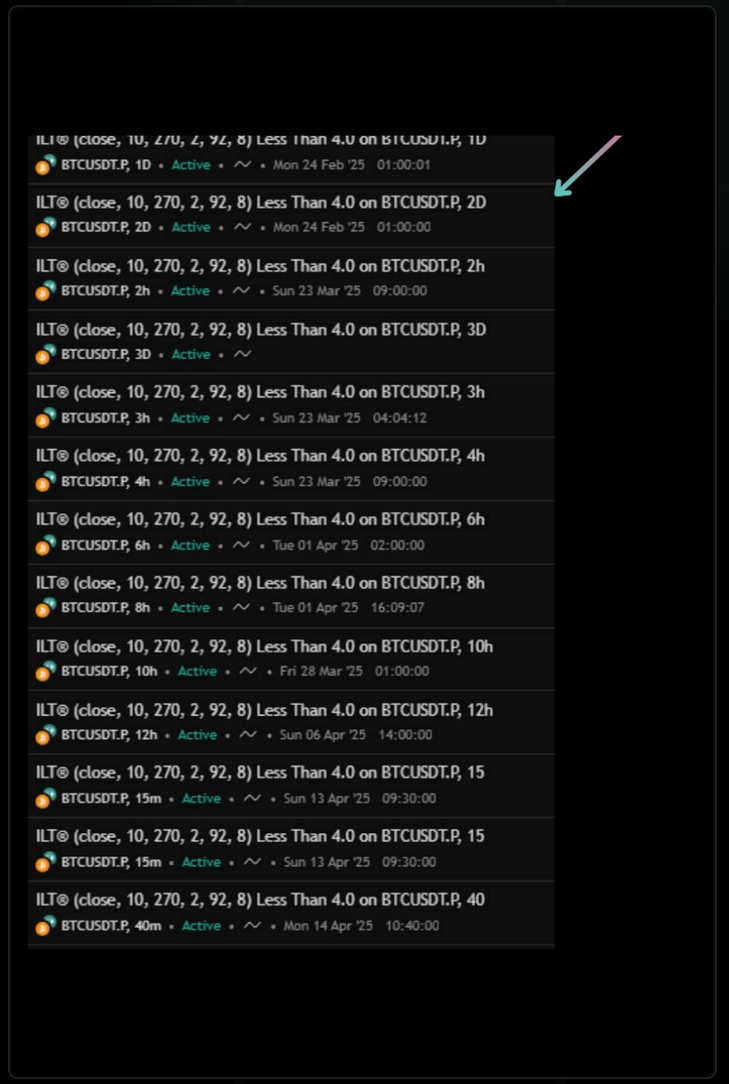

Cover every timeframe.

You get an app notification and an email whenever ◆ Aqua Diamonds appear on the GCL — no need to watch the screen.

EXTENDED SET	ALERT TIMEFRAMES
LOW	15m · 1H · 2H · 3H · 4H
MID	5H · 6H · 7H · 8H · 9H · 10H · 12H · 18H · 23H · D
HIGH	2D · 3D · 4D · 5D · 6D · W

CORE OR EXTENDED?

New here? Start with the **core set** from the Quick Start — this same list minus 7H, 9H, 18H and 4D. Add those four later if you want more signals: that's the full **extended set** above.

Example — one alert per timeframe.

ILT® · ALL RIGHTS RESERVED 2026

PART 2 · ALERTS

ILT® 2.0 alerts: the zone warning.

Get notified when the CL2 enters the Safe Zone or the Risky Zone.

1 **Right-click ILT® 2.0 2026**
Select **Add alert on ILT® 2.0 2026**.

2 **Condition**
ILT® 2.0 (Slow) · **Crossing**.

3 **Two alerts**
Low value **−27** / **−28.5** (Safe Zone) and high value **27** / **28.5** (Risky Zone).

4 **Recommended timeframes**
`15m · 55m · 1H · 4H · 12H · 23H · D · 2D`

NOTIFICATIONS

Customise how the alert reaches you in the **Notifications** tab — app, email, sound.

ILT® 2.0 alert · Crossing · 27.

ILT® · ALL RIGHTS RESERVED 2026

PART 2 · ALERTS

Fixing loading errors.

You may occasionally see an indicator error. Three quick fixes:

Typical loading errors on a multi-chart layout.

METHOD 1

Switch to another **timeframe**, then back.

METHOD 2

Switch to another **indicator template**, then back to A1.

METHOD 3

Multi-chart layout: right-click the chart with ILT® → **Apply These Indicators to Entire Layout**.

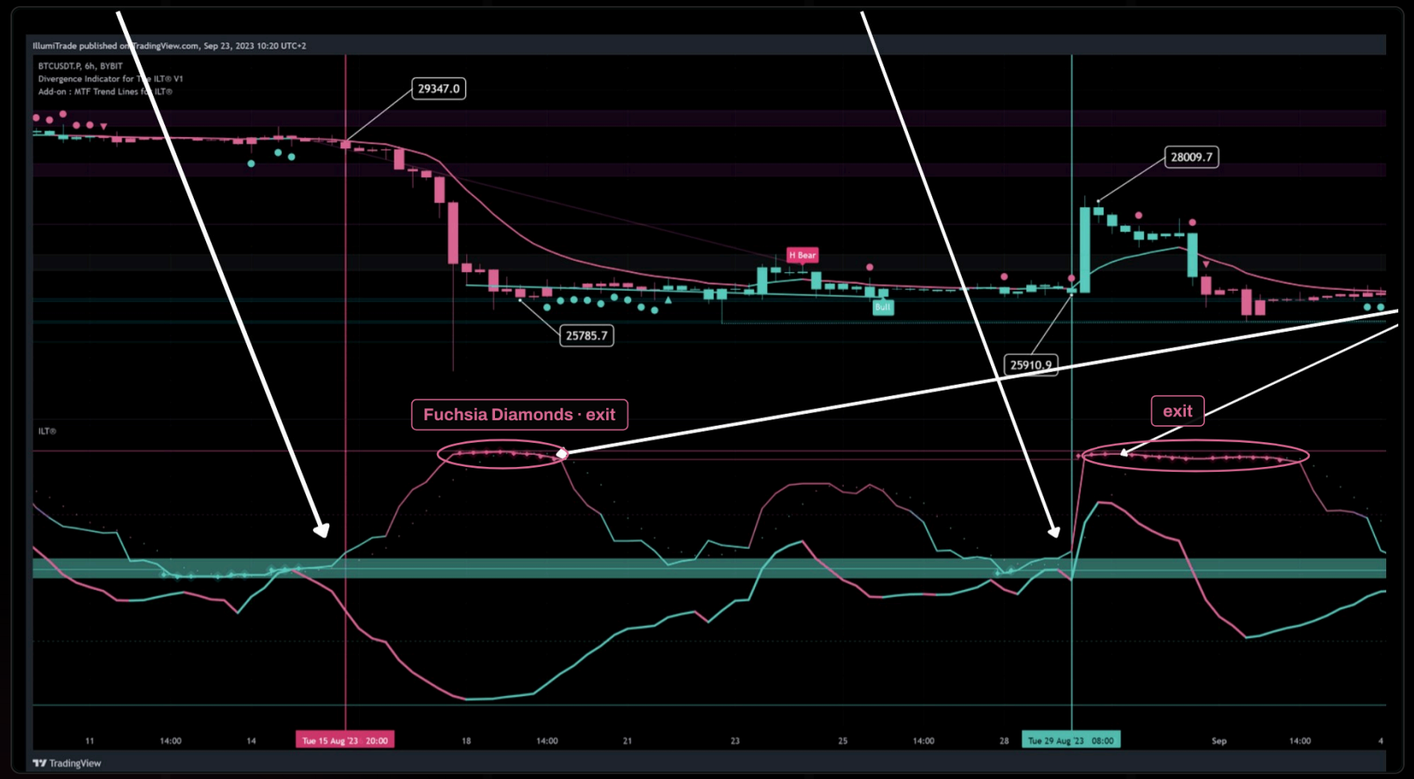

ILT® · ALL RIGHTS RESERVED 2026

PART 3 · STRATEGIES

ILT® V1: open & close.

SHORT if the Colored Line is Fuchsia

LONG if the Colored Line is Aqua

Real ILT® V1 chart. Arrows from the top: entries. Arrows from the right: exits.

TO OPEN

- Aqua Diamonds ◆ appear on the GCL.
- The GCL has a **positive slope** and has **crossed above the Cross Line**.
- Then **LONG** if the CL is Aqua, **SHORT** if it is Fuchsia.

TO CLOSE

- Close a long when the CL turns **Fuchsia**; a short when it turns **Aqua**.
- The GCL is at a high level, about to dip below the Cross Line.
- Optional: close on Fuchsia Diamonds ◆ — exhaustion.

ILT® · ALL RIGHTS RESERVED 2026

PART 3 · STRATEGIES

Avoiding sideways markets.

WARNING

Negative slope = sideways

A GCL with a **negative slope**, especially below the Cross Line, means a local top or bottom has been reached — a **sideways phase** follows before a reversal or a continuation, once the GCL resets.

CHECK

Look higher first

Regularly check the GCL on **higher timeframes**: a negative slope there creates deceptive moves and false signals on lower timeframes.

OPTIMAL

Positive slope from low

A **positive slope from a low level** — ideally inside the Blue Box, across multiple timeframes — is the optimal setup for a significant move.

RULE OF THUMB

For a robust setup, look for the GCL **resetting on as many timeframes as possible**. The more timeframes agree, the more reliable the signal.

ILT® · ALL RIGHTS RESERVED 2026

PART 3 · STRATEGIES

Reading the timeframes.

WHEN TO TRADE

- The GCL has **reset** (low level, near the Blue Box) on most low and mid timeframes — ideally with ◆ alerts.
- Alerts on most low/mid timeframes are usually enough. Alerts on **almost all** timeframes = the ideal setup.
- Usually, alerts on low timeframes mean the GCL on mid timeframes has already reset — the move starts when it turns up and exits the Blue Box.

WHEN TO WAIT

- The GCL has a negative slope on most mid/high timeframes → confusion, messy moves on lower ones. Trade short-term only, or prepare the next entry.
- Alerts on only one or two low timeframes while higher ones slope down → a small local move. Take profit quickly.
- ◆ on high timeframes, or a GCL high then turning down → exhaustion: a top or bottom is near.

SIGNIFICANCE

These conditions on the **Daily and above** often mark a **significant** top or bottom. On low timeframes only, just a **local** one.

SUMMARY

What you see on low timeframes is **weaker** than what you see on high timeframes.

ILT® · ALL RIGHTS RESERVED 2026

PART 3 · STRATEGIES

ILT® 2.0: signals.

ILT® 2.0 merges the CL and GCL to separate genuine moves from false ones — so you know when to trade and when to hold back.

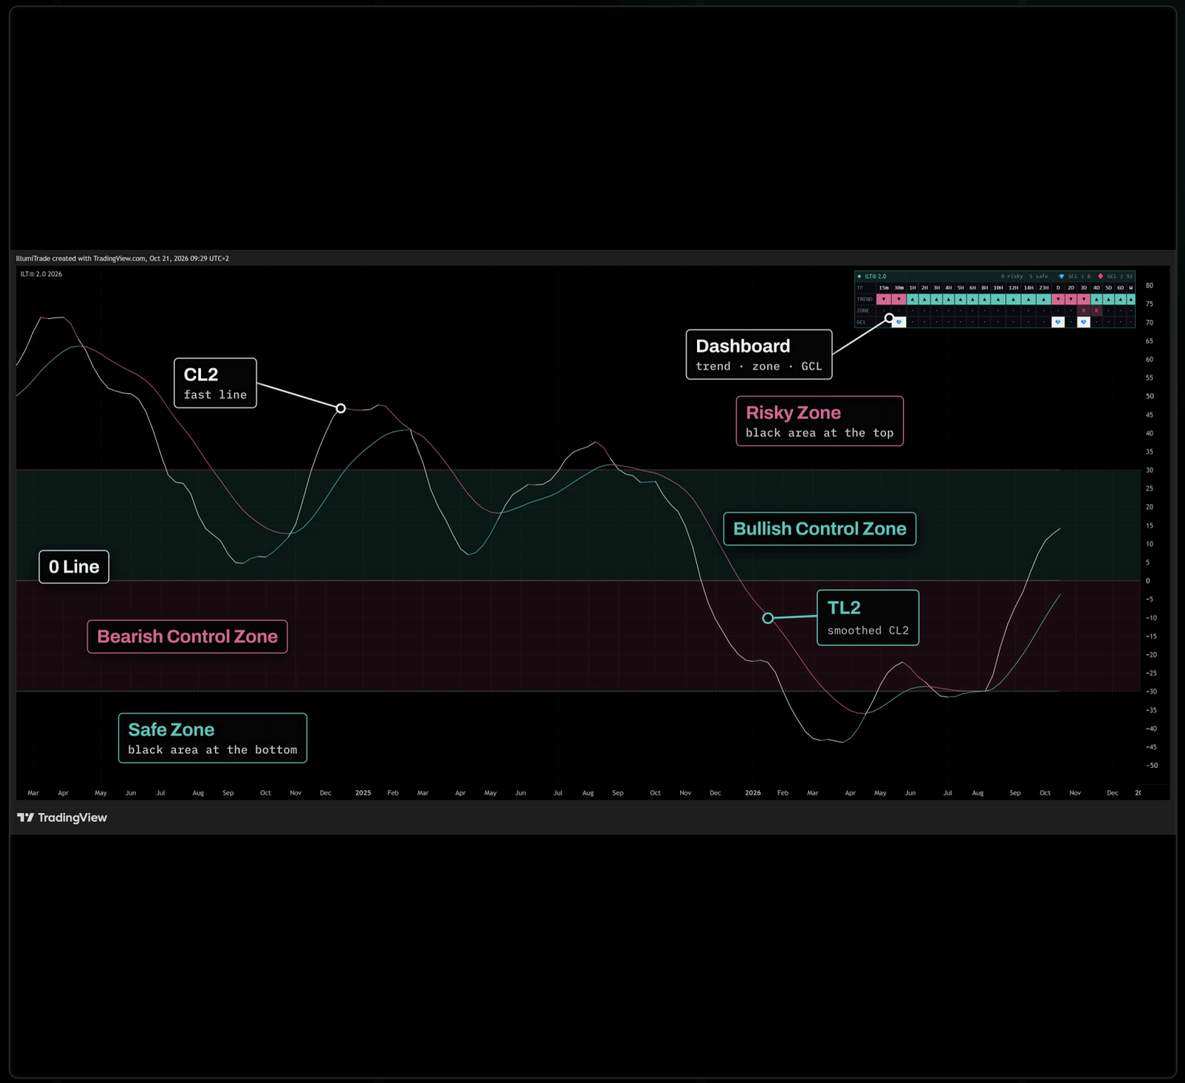

LINES

CL2 Oscillates above / below the 0 Line. Positive = bullish trend, negative = bearish.

TL2 Smoothed CL2. Filters short-term noise to show the direction and strength of the trend.

SIGNALS

- **Long** — CL2 crosses above TL2, with TL2 ideally above 0.
- **Short** — CL2 crosses below TL2, with TL2 ideally below 0.
- **Take profit** — CL2 crosses back through TL2 the other way.

ILT® 2.0 on a real chart.

ILT® · ALL RIGHTS RESERVED 2026

PART 3 · STRATEGIES

ILT® 2.0: the zones.

SAFE ZONE · ≈ −27 / −28.5

More buyers than sellers

The asset is in demand: price is likely to rise, or at least hold. A potential **bottom → long**.

RISKY ZONE · ≈ +27 / +28.5

More sellers than buyers

Demand is fading: price is likely to fall or stay unstable. A potential **top → short**.

BULLISH CONTROL ZONE

CL2 in the upper band — buyers in control of the trend.

BEARISH CONTROL ZONE

CL2 in the lower band — sellers in control of the trend.

BOUNCES

A favourable entry often appears when the CL2 is **rejected** from the Risky Zone (≈ 27 / 28.5) or the Safe Zone (≈ −28.5 / −27).

ILT® · ALL RIGHTS RESERVED 2026

PART 3 · STRATEGIES

Catching tops & bottoms.

The ILT® 2.0 method for the very extremes.

1 **Watch the entry timeframes**
Split your screen into **15m · 55m (or 1H) · 4H** and save the layout. For short-term trading, 1m · 5m · 15m also work.

2 **Check the higher timeframes**
Monitor **4H · 12H · Daily** (also 2D, 3D, 4D, 5D, 6D, W). Are they approaching the Risky or Safe Zone, or already turning?

3 **Wait for the lower timeframes**
When the higher timeframes are near an extreme, wait for the CL2 on 15m / 1H / 4H to reach the same zone.

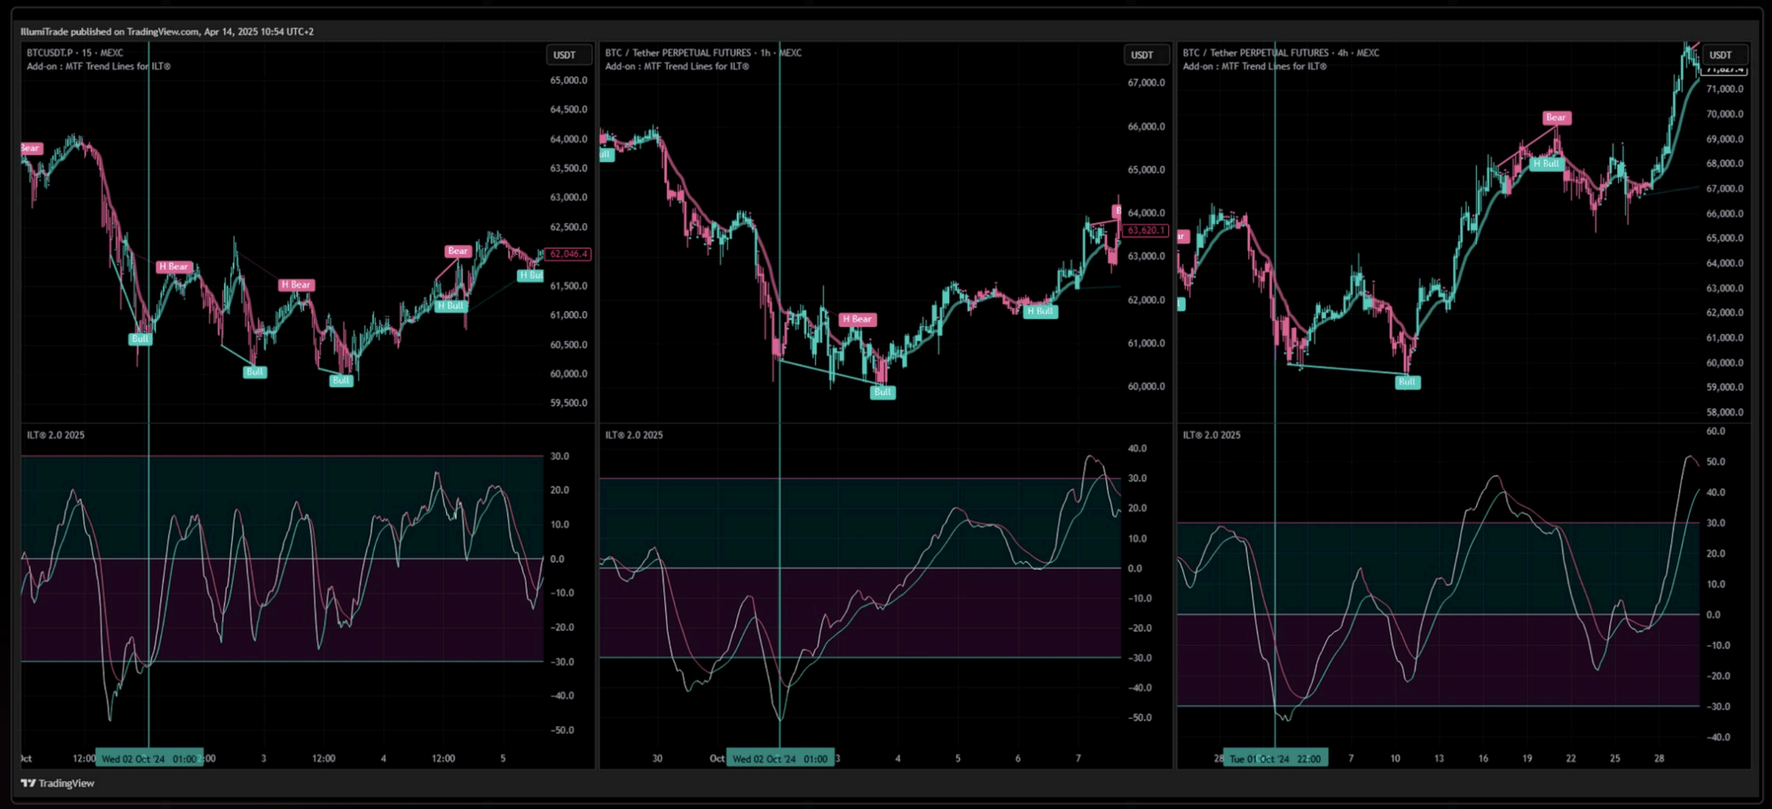

4 **Enter on alignment**
Enter when **both** higher and lower timeframes sit in or near the same zone. Confirm with ILT® 2+ divergences. Use 1m–15m to accumulate gradually.

ILT® · ALL RIGHTS RESERVED 2026

PART 3 · STRATEGIES

Tops & bottoms in practice.

Same asset, three timeframes side by side: the zones line up at the extremes.

Example 1 — 15m · 1H · 4H.

EXAMPLE 1

15m · 1H · 4H

Same asset on three timeframes side by side. The zones line up at the extremes — that alignment is what marks the top or the bottom.

ILT® · ALL RIGHTS RESERVED 2026

PART 3 · STRATEGIES

Tops & bottoms in practice.

Same asset, three timeframes side by side: the zones line up at the extremes.

Example 2 — Another move.

EXAMPLE 2

Another move

Same method on a different move: when the zones agree across timeframes, the reversal follows.

ILT® · ALL RIGHTS RESERVED 2026

PART 3 · STRATEGIES

The ILT® 2.0 dashboard.

The labels change colour to show whether the CL2 is in the Risky or Safe Zone on 15m, 1H and 4H.

ILT® 2.0 dashboard — the ZONE row shows R (Risky) or S (Safe) per timeframe.

READ IT TOP-DOWN

Check the long timeframes (right side) first, then the short ones. Matching TREND and ZONE across columns = alignment.

1 · CHECK THE TREND

Higher timeframes first

- Bullish or bearish control zone?
- Risky or Safe Zone — or close to one?
- CL2 above or below TL2? Is TL2 aqua or fuchsia?

2 · FIND THE ENTRY

Then zoom in: 23H · D · 12H · 4H

- **Long** — D, 12H and 4H in the Safe Zone, or in the bearish zone with an aqua CL2, or CL2 above TL2.
- **Short** — D, 12H and 4H in the Risky Zone, or in the bullish zone with a fuchsia CL2, or CL2 below TL2.

ILT® · ALL RIGHTS RESERVED 2026

PART 3 · STRATEGIES

Easy risk management.

1 **Wait for alignment**

Conditions met on **3 to 5 timeframes**.

2 **Set the stop**

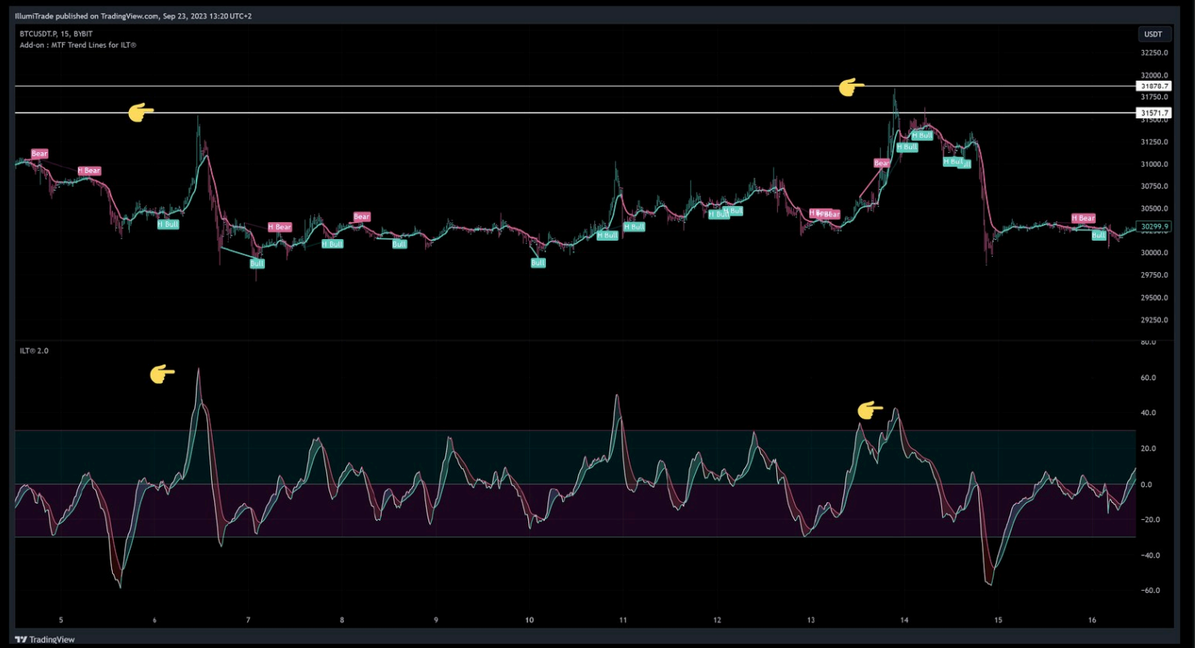

Just **above the last local top** (short) or **below the last local bottom** (long). The two white lines on the chart show where.

3 **Don't fear stop-outs**

If you're stopped out, repeat the process until the real move begins — it pays for the small losses.

ALTERNATIVE · ACCUMULATE

Build a position each time 15m / 1H / 4H enter the Risky or Safe Zone while higher timeframes confirm a major extreme — how we traded Bitcoin from 98k to 110k at its last major top.

Stop placement — above the last local top / below the last local bottom.

ILT® · ALL RIGHTS RESERVED 2026

PART 3 · STRATEGIES

V1 vs 2.0: pick your style.

Use either strategy — or both. Many members, including us, combine them.

ILT® V1

Catch the wave

Enters after a sideways phase, just before a major move — often close to the extremes, without needing to pinpoint them.

ILT® 2.0

Snipe the extreme

Finds the very tops and bottoms. It may take a couple of attempts, but with a tight stop you can open low-risk positions or accumulate.

BOTH

Confirmation

When V1 and 2.0 agree, you get the strongest trades.

SUPPORTS & RESISTANCES

The most important levels to watch are on the **1H, 4H and 3D**.

ILT® · ALL RIGHTS RESERVED 2026

PART 4 · EXTRA TOOLS

Add-on: MTF Trend Lines.

Automatic support and resistance across timeframes.

LINES

- **Fuchsia** = resistance — price tends to drop when it meets one.
- **Aqua** = support — price tends to rise from one.
- **Solid** = higher-term trend lines · **dotted** = shorter-term.
- Colour intensity shows how significant each level is.

CHART MARKERS

- **Dots** ●● — CL2 curling up under TL2 or down over TL2.
- **Triangles** ▲ ▼ — CL2 crossing above or below TL2.

Real call · Brent, 16 Oct 2026 — trend lines, zones, dots and triangles before the breakout.

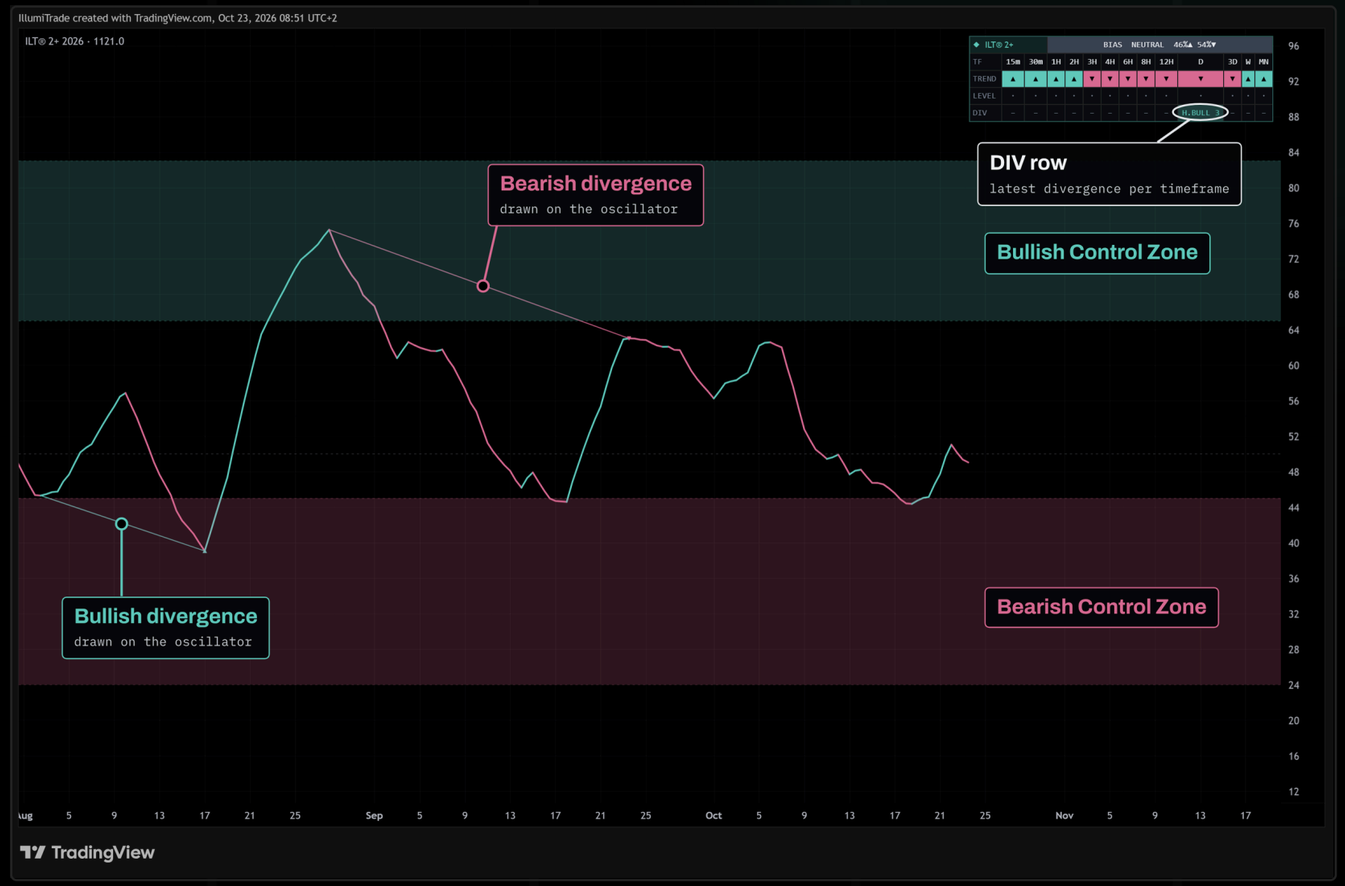

ILT® · ALL RIGHTS RESERVED 2026

PART 4 · EXTRA TOOLS · BONUS

ILT® 2+

Divergences — a previous ILT® version, still very useful to confirm tops and bottoms.

- **Bullish / Bearish Control Zones** plus regular and hidden divergences, drawn on the oscillator.
- **DIV row** on the dashboard: the latest divergence per timeframe and how many candles ago — e.g. **H.BULL 3** = hidden bullish, 3 candles ago.
- **BIAS**: the overall lean across all timeframes — e.g. Neutral, 46% ▲ / 54% ▼.

ILT® 2+ on a live chart — control zones, divergences and the DIV row.

ILT® · ALL RIGHTS RESERVED 2026

MASTERY

Key tips for mastery.

01

Master one chart

Know one asset across every timeframe: its patterns, supports, resistances and reversals. Depth beats breadth.

02

Less is more

Not every day is a setup day. Fewer trades cut risk and stress and focus you on the significant moves.

03

Think independently

Consensus feels safe but the market rarely follows it. Question, analyse — and tune out the herd and social media noise.

04

Make it instinct

Apply the conditions in real time, especially around tops and bottoms, until reading them becomes automatic.

05

Use the full picture

Combine the indicators across timeframes with your own view of the fundamentals.

06

Focus your time

Spend your trading time on the indicators across multiple timeframes — not on scattered charts.

ILT® · ALL RIGHTS RESERVED 2026

QUICK REFERENCE

Cheat sheet — keep & print.

GOLDEN RULES

- Trade with the higher-timeframe trend.
- More aligned ◆ alerts = stronger move.
- Low timeframes are weaker than high ones.
- Avoid a GCL with a negative slope on high timeframes.

ILT® V1

- ◆ Aqua = setup · ◆ Fuchsia = exhaustion.
- GCL positive slope + above Cross Line → LONG if CL Aqua · SHORT if CL Fuchsia.
- Exit when the CL flips colour.

ILT® 2.0

- Risky Zone (> +27) = top → short · Safe Zone (< −27) = bottom → long.
- CL2 crossing TL2 = signal · cross back = take profit.
- Tops & bottoms: 15m / 1H / 4H aligned with 4H / 12H / D.

RISK & ALERTS

- Stop above the last top / below the last bottom.
- Don't fear stop-outs · fewer trades = less risk.
- Alerts — V1: **Less Than 4** · 2.0: **CL2 crossing ±27 / 28.5**.
- Key S/R: 1H · 4H · 3D.

ILT® · ALL RIGHTS RESERVED 2026

HELP

Need a hand? We're here.

CAN'T FIND THE INDICATORS

- They're under **Invite-only scripts** in the Indicators (fx) menu.
- Access goes to the TradingView username you gave when you joined — allow a few hours.
- Still missing? Send us your TradingView username.

INDICATOR ERROR

- See **Fixing loading errors**, page 17.
- Re-apply the A1 template.
- Multi-chart: Apply These Indicators to Entire Layout.
