ILLUMITRADE®

ILT® 2026 GUIDE · QUICK START

Set up. Read it. Trade it.

Everything you need to place your first ILT® trade — set up in 5 minutes, first signal in 15.

5-minute setup | Your first signal | Alerts | Cheat sheet

HOW TO READ THIS GUIDE

Built in 3 parts. You don't need all of it to start.

PART 1 · 15 MIN

Quick Start

Set up the indicators and read your first signal. **You can trade after Part 1.**

PART 2

The Method

The full ILT® logic — multi-timeframe, V1, 2.0 and risk management — explained once, clearly.

PART 3

Mastery

Advanced tools, the habits of consistent traders, and a one-page cheat sheet.

Why it works 03

Know your screen 05

Your first signal — 2 rules 07

Set it & forget it — alerts 09

ILT® V1 in depth 11

V1 vs 2.0 & risk management 13

Cheat sheet 16

Set up in 5 minutes 04

Read the dashboard 06

A trade, step by step 08

The golden rule: multi-timeframe 10

ILT® 2.0 in depth 12

WHY IT WORKS

Stop guessing. Start reacting.

Most traders guess. The ILT® indicators show you two things automatically, on every timeframe.

WINDING UP

The move is loading

An asset is **loading for a big move** when the **GCL resets to a low level** and **Aqua Diamonds** appear.

EXHAUSTED

The move is running out

A move is **running out of fuel** when **Fuchsia Diamonds** appear — often a local top or bottom.

THE WHOLE EDGE

Instead of staring at charts hoping, you **wait for the setup to come to you** — and act with confidence on clear, repeatable signals.

ILT® · ALL RIGHTS RESERVED 2026

PART 1 · QUICK START

Set up in 5 minutes.

1 **Log in to TradingView**

Open any chart — BTC, a stock, forex, anything.

2 **Add the 3 ILT® indicators**

Indicators (ƒx) → **Invite-only scripts** → ILT® V1 2026 · ILT® 2.0 2026 · ILT® Add-on 2026 — plus **ILT® 2+** (optional).

3 **Turn Dark Mode on**

Settings menu → Dark mode, for clean candle and line visibility.

4 **Save it as a template**

Toolbar → *Save Indicator template*, name it **"A1"**. All 3 indicators now load in one click on any chart.

Your chart once everything is set up — price with the Add-on, then ILT® V1, ILT® 2.0 and the optional ILT® 2+, dashboards on the right.

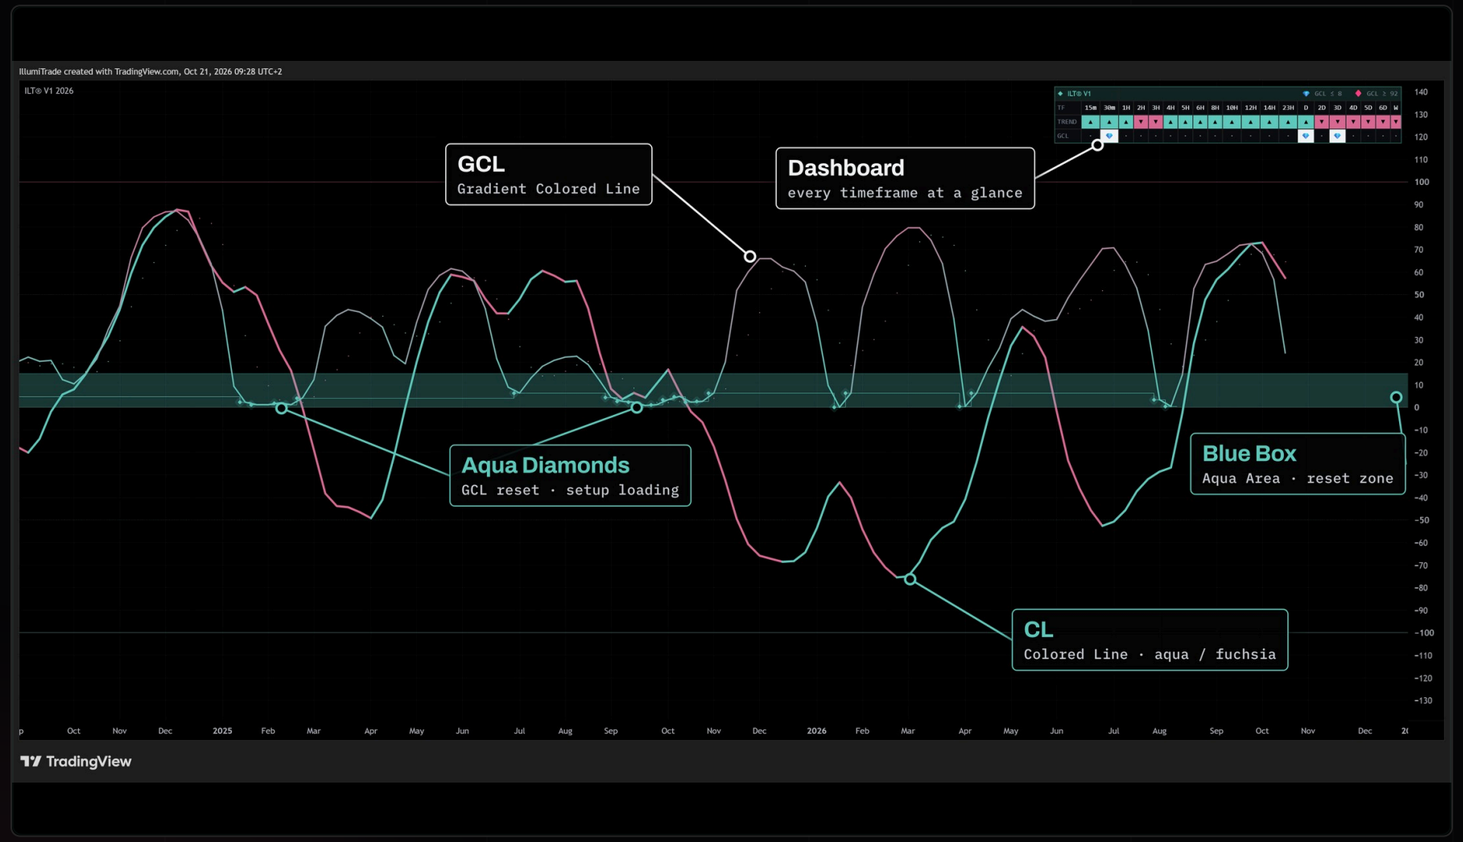

OPTIONAL · BRAND LOOK

In the Add-on settings keep both **PlotCandle** boxes checked, then uncheck **Body / Borders / Wick** in the chart settings — your candles take the ILT® 2.0 colours.

ILT® · ALL RIGHTS RESERVED 2026

PART 1 · QUICK START

Know your screen: ILT® V1.

ILT® V1 on a real chart — the key elements labelled.

GCL	**Gradient Colored Line** — the main line. Low = loading up. High with a negative slope = exhausted.
CL	**Colored Line** — your direction. Aqua = long bias, Fuchsia = short bias.
CROSS LINE	Your reference level for the GCL.
BLUE BOX	**Aqua Area** — the reset / accumulation zone.
◆AQUA	**Aqua Diamonds** — a setup is forming. Potential entry.
◆FUCHSIA	**Fuchsia Diamonds** — exhaustion, local top or bottom.

ILT® · ALL RIGHTS RESERVED 2026

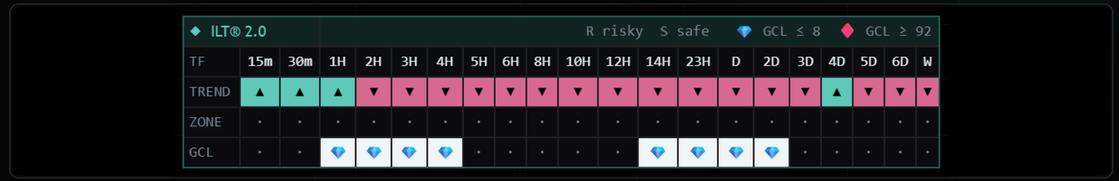

PART 1 · QUICK START

Read the dashboard in 5 seconds.

Both indicators show a dashboard on the right of the chart: one column per timeframe, from 15m to W.

ILT® V1 dashboard

ILT® 2.0 dashboard — adds the ZONE row.

ROW

TF

The timeframe of each column, short to long.

ROW

TREND

▲ aqua = bullish · ▼ fuchsia = bearish on that timeframe.

ROW · 2.0

ZONE

R = Risky Zone · S = Safe Zone.

ROW

GCL

◆ = GCL reset, a setup is loading · ◆ = GCL at the top, exhausted.

HOW TO USE IT

Look for ◆ **stacking across several timeframes** — the more columns, the stronger the setup. Then apply the golden rule: trade in the direction the **higher-timeframe TREND** shows.

ILT® · ALL RIGHTS RESERVED 2026

PART 1 · QUICK START

Your first signal — just 2 rules.

Start with ILT® V1. This is a complete trade on its own — everything else makes it stronger and safer.

RULE 1 · TO OPEN

Wait for the setup, then follow the colour

- **Aqua Diamonds** appear on the GCL.
- The GCL turns up (**positive slope**) and **crosses above the Cross Line**.
- Then: **LONG** if the Colored Line is Aqua · **SHORT** if it is Fuchsia.

RULE 2 · TO CLOSE

Exit when the colour flips

- Close a **long** when the Colored Line turns **Fuchsia**.
- Close a **short** when the Colored Line turns **Aqua**.
- Or take profit on **Fuchsia Diamonds** — exhaustion, a local top or bottom.

BEFORE EVERY TRADE

Check the higher timeframes first. A signal that agrees with them is strong; one that fights them is weak. More on this in Part 2.

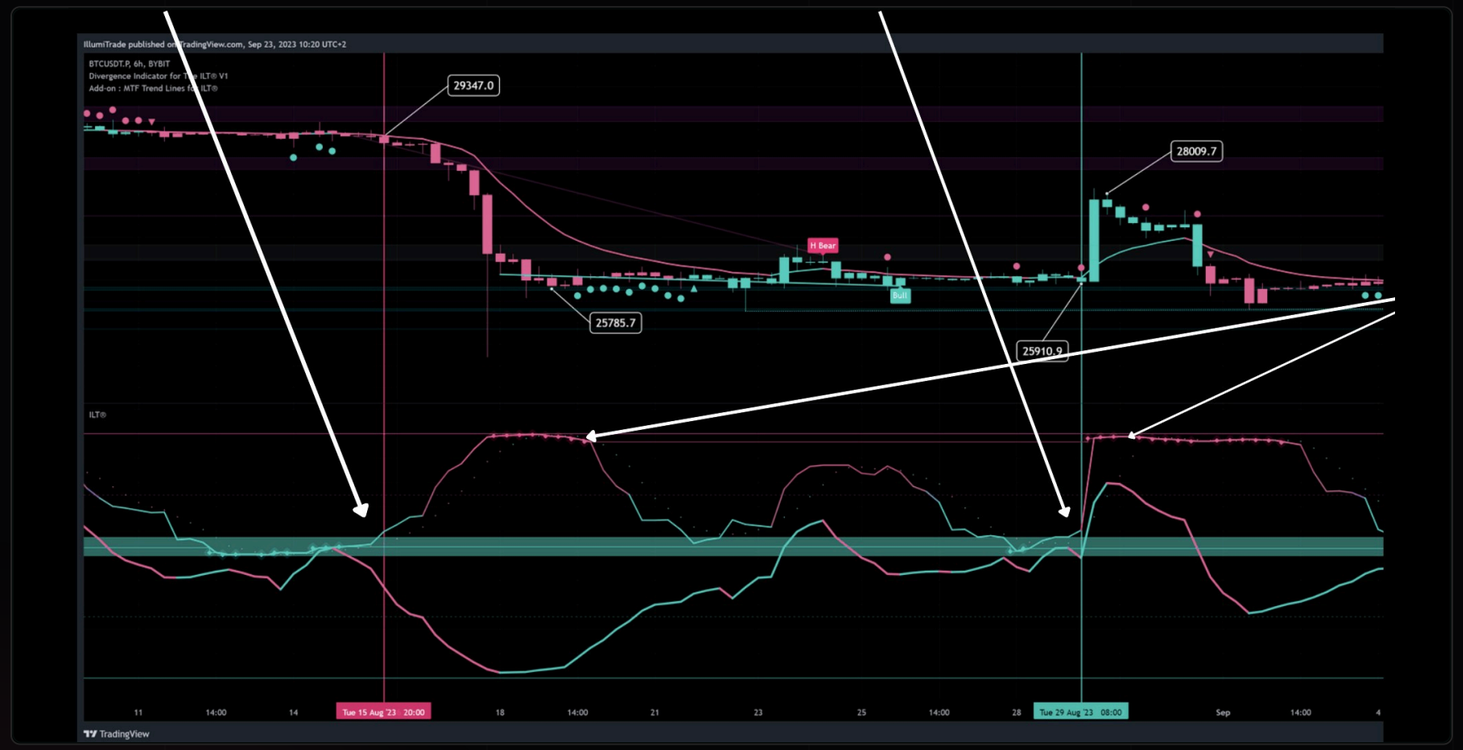

ILT® · ALL RIGHTS RESERVED 2026

PART 1 · QUICK START

A trade, step by step.

SHORT if the Colored Line is Fuchsia

LONG if the Colored Line is Aqua

Real ILT® V1 chart. The two arrows from the top mark the entries; the arrows from the right mark the exits — the GCL at a high level, about to dip below the Cross Line.

1 Setup loads
Aqua Diamonds ◆ appear on the GCL — get ready, don't act yet.

2 Trigger
The GCL turns up and crosses above the Cross Line.

3 Direction
Read the Colored Line: Aqua → long, Fuchsia → short.

4 Stop
Just below the last local bottom (long) or above the last local top (short).

5 Exit
The Colored Line flips colour, or Fuchsia Diamonds ◆ appear.

ILT® · ALL RIGHTS RESERVED 2026

PART 1 · QUICK START

Set it & forget it.

1 **Create the alert**

Right-click **ILT® V1 2026** → **Add alert** → condition **Less Than**, value **4** (the GCL reaching a low level).

2 **Repeat on each timeframe**

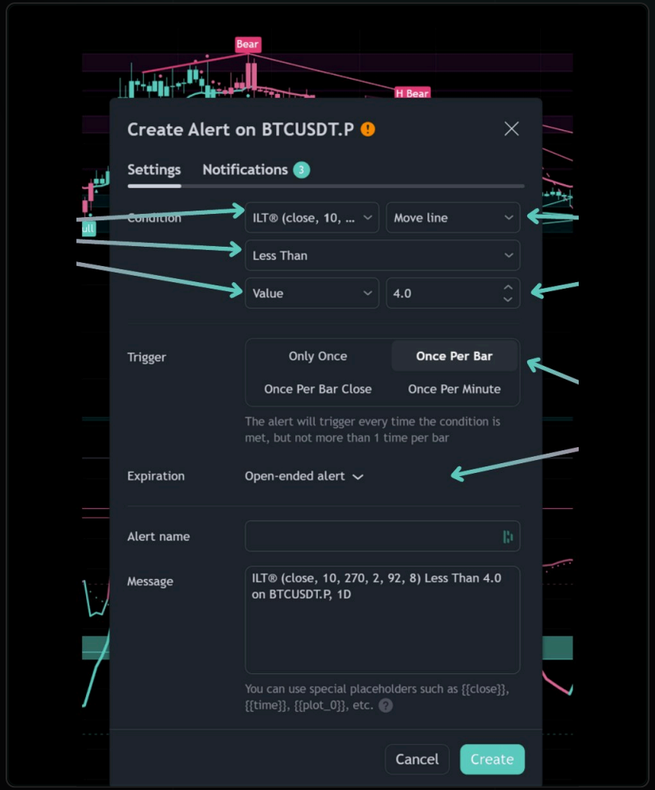

Use the core set below — one alert per timeframe you trade.

3 **Get notified**

App + email the moment a ◆ setup forms. Check your dashboard once a day; the alerts do the rest.

CORE SET	ALERT TIMEFRAMES
LOW	15m · 1H · 2H · 3H · 4H
MID	5H · 6H · 8H · 10H · 12H · 23H · D
HIGH	2D · 3D · 5D · 6D · W

This core set catches every major setup. The Full Edition lists an extended set (7H, 9H, 18H, 4D…) for wider coverage.

ILT® V1 alert · Less Than · 4 · Once per bar · Open-ended.

ILT® 2.0 ALERT

Same idea: alert when **CL2 crosses ±27 / 28.5** — it's entering the Risky or Safe Zone.

ILT® · ALL RIGHTS RESERVED 2026

PART 2 · THE METHOD

The golden rule: multi-timeframe.

Read this twice. It's the core of everything.

01

Trade with the higher timeframes

Always trade in the direction of the **higher timeframes (HTF)**.

02

Low TF is weaker

What you see on low timeframes is **weaker** than what you see on high timeframes.

03

Alignment = strength

More aligned ◆ alerts across timeframes = a **stronger, cleaner move**.

WHEN TO TRADE

- The GCL has **reset** (low level, near the Blue Box) on most low & mid timeframes — ideally with alerts stacking up.
- ◆ on the **Daily and above** → expect a **significant** top or bottom.

WHEN TO SIT OUT

- The GCL has a **negative slope on high timeframes** → messy, deceptive moves. Wait, or trade small and fast.
- ◆ only on low timeframes → just a **local** top or bottom.

ILT® · ALL RIGHTS RESERVED 2026

PART 2 · THE METHOD

ILT® V1 in depth.

THE 4 ELEMENTS

GCL	Gradient Colored Line — reset low = loading up; high with a negative slope = exhausted.
CL	Colored Line — your direction: Aqua = long bias, Fuchsia = short bias.
CROSS LINE	Your reference level.
BLUE BOX	Aqua Area — the reset / accumulation zone.

◆ **Aqua Diamonds** = potential entry · ◆ **Fuchsia Diamonds** = exhaustion, local top or bottom.

AVOIDING SIDEWAYS MARKETS

The optimal setup

A GCL with a **positive slope from a low level** — inside the Blue Box, across multiple timeframes — is the optimal setup for a significant move.

WARNING

The sideways trap

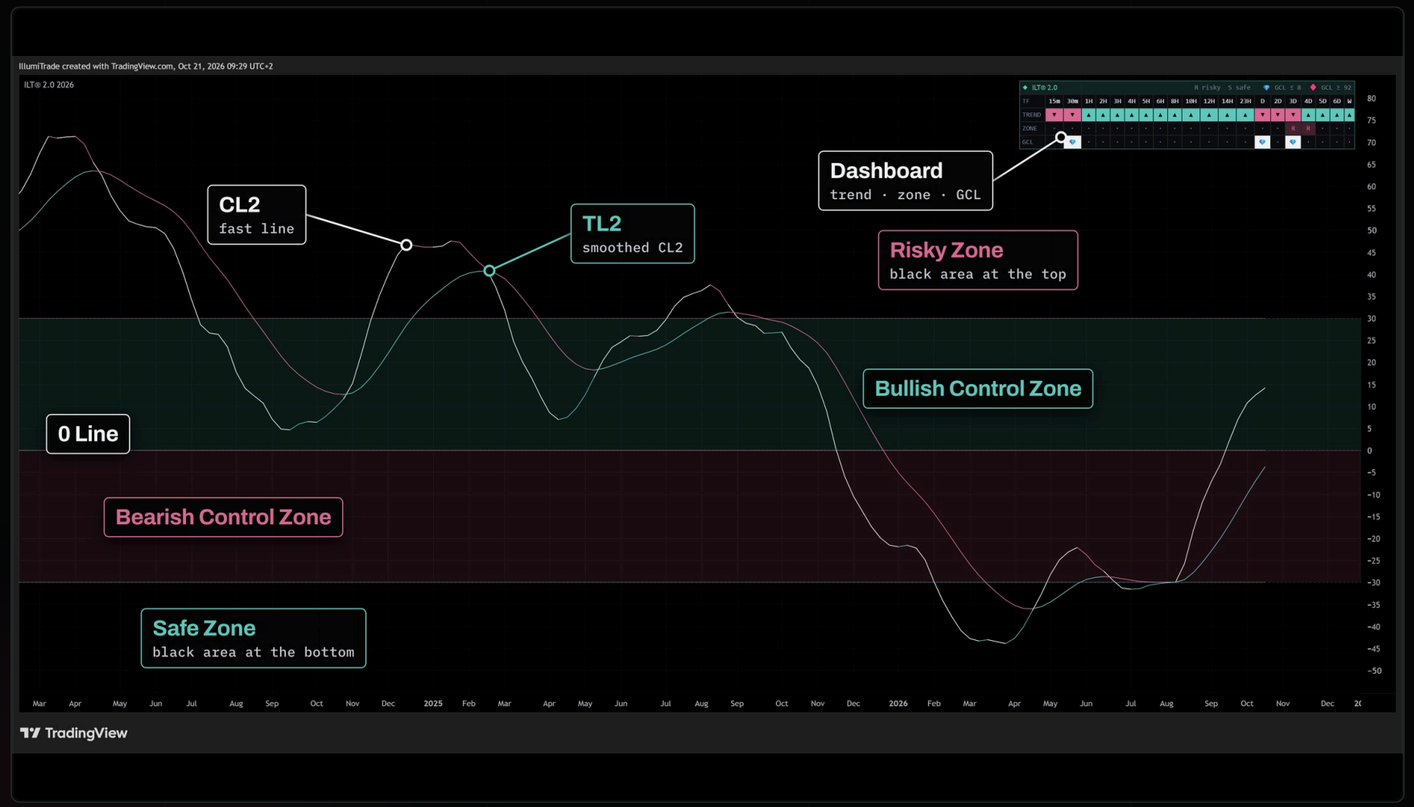

A **negative slope**, especially below the Cross Line, signals a sideways phase. Always check several timeframes before trusting a signal.

ILT® · ALL RIGHTS RESERVED 2026

PART 2 · THE METHOD

ILT® 2.0 in depth.

The upgrade: ILT® 2.0 merges the CL and GCL to separate real moves from fake ones.

ILT® 2.0 — CL2, TL2, the 0 Line and the two zones.

LINES

- **CL2** Oscillates around the 0 Line. Above = bullish, below = bearish.
- **TL2** Smoothed CL2 — trend direction and strength.

SIGNALS

- **LONG** → CL2 crosses above TL2 (ideally TL2 above 0).
- **SHORT** → CL2 crosses below TL2 (ideally TL2 below 0).
- **Take profit** → CL2 crosses back through TL2.

ZONES

- **Risky Zone** — the black area at the top (≈ +27 / +28.5) = potential top → short.
- **Safe Zone** — the black area at the bottom (≈ −27 / −28.5) = potential bottom → long.

ILT® · ALL RIGHTS RESERVED 2026

PART 2 · THE METHOD

V1 vs 2.0 & risk management.

ILT® V1

Catches the wave

Enters after a sideways phase, right before a major move.

ILT® 2.0

Sniper entries

Pinpoints the exact extremes — tops, bottoms and accumulation zones.

BEST

Combine both

They confirm each other → **the strongest trades**.

EASY RISK MANAGEMENT

- When **3–5 timeframes align**, place your stop just above the last local top (short) or below the last local bottom (long).
- **Don't fear a stop-out.** Re-enter on the next reset — the real move pays for the small losses.

TOPS & BOTTOMS

- Watch **15m / 1H / 4H** and confirm with the higher timeframes (4H / 12H / Daily).
- Accumulate near the zones when the higher timeframes confirm a major extreme.
- Key support / resistance levels: **1H · 4H · 3D**.

ILT® · ALL RIGHTS RESERVED 2026

PART 3 · MASTERY

Going further.

Three extra tools included in your membership.

ADD-ON

MTF Trend Lines

Automatic support & resistance. **Solid** = higher-term, **dotted** = shorter-term. Fuchsia = resistance, Aqua = support.

ILT® 2+

Divergences

Divergences, Bullish / Bearish Control Zones and a **Last Divergence** dashboard column. Confirms tops and bottoms.

SCANNER

ILT® GCL Scanner

Scan your whole watchlist on **Daily / Weekly / Monthly** for ◆ setups across hundreds of assets at once — from TradingView's Pine Screener.

GO DEEPER

Every setting, alert and strategy is covered step by step in the ILT® 2026 Guide — Full Edition.

ILT® · ALL RIGHTS RESERVED 2026

PART 3 · MASTERY

Trading wisdom: less is more.

The traders who win with ILT® long-term all do the same things.

01

Master one chart

Depth beats breadth — know your asset across all timeframes.

02

Fewer trades, bigger results

Not every day is a setup day. Patience cuts risk and stress.

03

Trust your analysis

Not the crowd. The best results often come from tuning out the noise.

04

Make it instinct

Practise reading tops and bottoms until it's automatic.

05

Protect your capital

Quality over quantity — the outsized moves will find you.

06

Let alerts work

Set them once, check the dashboard daily, act only on aligned setups.

ILT® · ALL RIGHTS RESERVED 2026

QUICK REFERENCE

Cheat sheet — keep & print.

GOLDEN RULES

- Trade with the higher-timeframe trend.
- More aligned ◆ alerts = stronger move.
- Low timeframes are weaker than high ones.
- Avoid a GCL with a negative slope on high timeframes.

ILT® V1

- ◆ Aqua = setup / entry · ◆ Fuchsia = exhaustion.
- GCL positive slope + above the Cross Line → **LONG** if CL Aqua · **SHORT** if CL Fuchsia.
- Exit when the CL flips colour.

ILT® 2.0

- Risky Zone (> +27) = top → short.
- Safe Zone (< −27) = bottom → long.
- CL2 crossing TL2 = signal.

RISK & ALERTS

- Stop above the last top / below the last bottom.
- Don't fear stop-outs · fewer trades = less risk.
- Alerts — V1: **Less Than 4** · 2.0: **CL2 crossing ±27 / 28.5**.

KEY PRINCIPLE

What you see on low timeframes is **weaker** than what you see on high timeframes.

ILT® · ALL RIGHTS RESERVED 2026

HELP

Stuck? Fix it in 30 seconds.

INDICATOR SHOWS A LOADING ERROR

- Switch to another timeframe, then back.
- Switch to another indicator template, then back to **A1**.
- Multi-chart layout: right-click the chart with the ILT® indicators → **Apply These Indicators to Entire Layout**.

CAN'T FIND THE INDICATORS

- They're under **Invite-only scripts** in the Indicators (fx) menu.
- Access is granted to the TradingView username you gave at checkout — allow a few hours after you join.
- Still missing? Send us your TradingView username.
