THE ILT® 2026 GUIDE

MASTER TRADING WITH THE ILT® INDICATOR

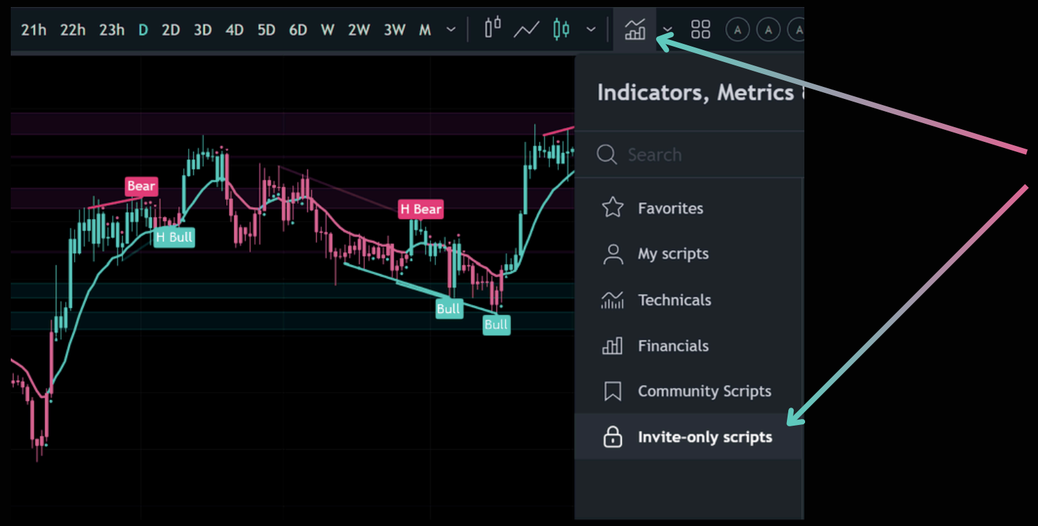

All rights reserved 2026 ILT®

INTRODUCTION:

If you read this guide, understand the conditions, and apply the ILT® indicator properly... you will be in the top 5% of traders.

SETUP INSTRUCTIONS

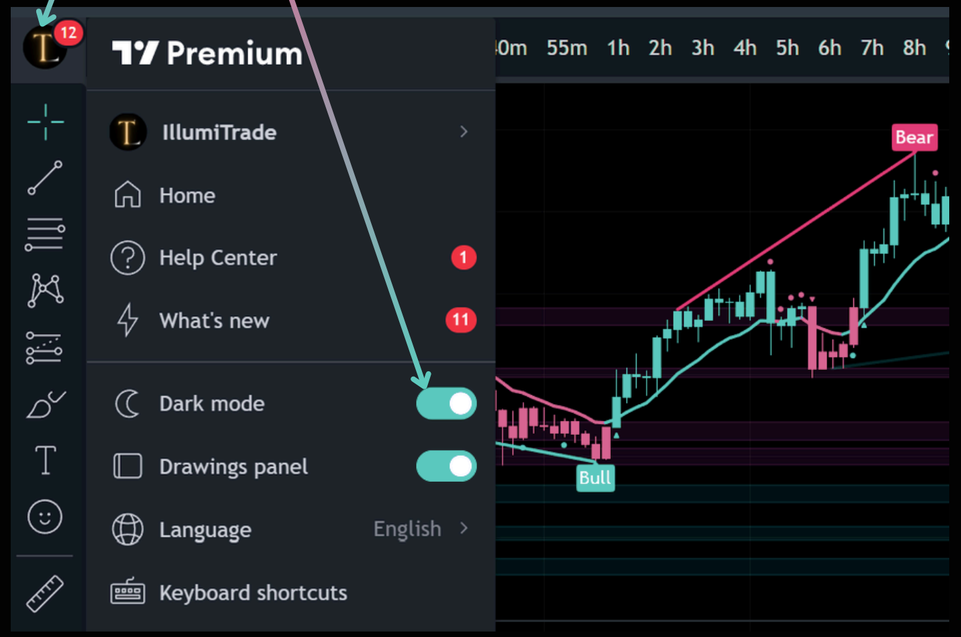

1. Log in to TradingView: Visit www.tradingview.com and sign in to your account. If you don’t have an account, click 'Sign Up' to create one (the free plan works for most features).
2. Open a Chart: From the TradingView homepage, click 'Chart' in the top menu to load a price chart for any asset (e.g., a stock, forex pair, or crypto).
3. Access Indicators: On the chart, locate the top toolbar and click the '*Indicators, Metrics, and Strategies*' button (it looks like a 'fx' icon or a bar graph).

This opens a menu where you can search for and add the Indicators.

SETUP INSTRUCTIONS

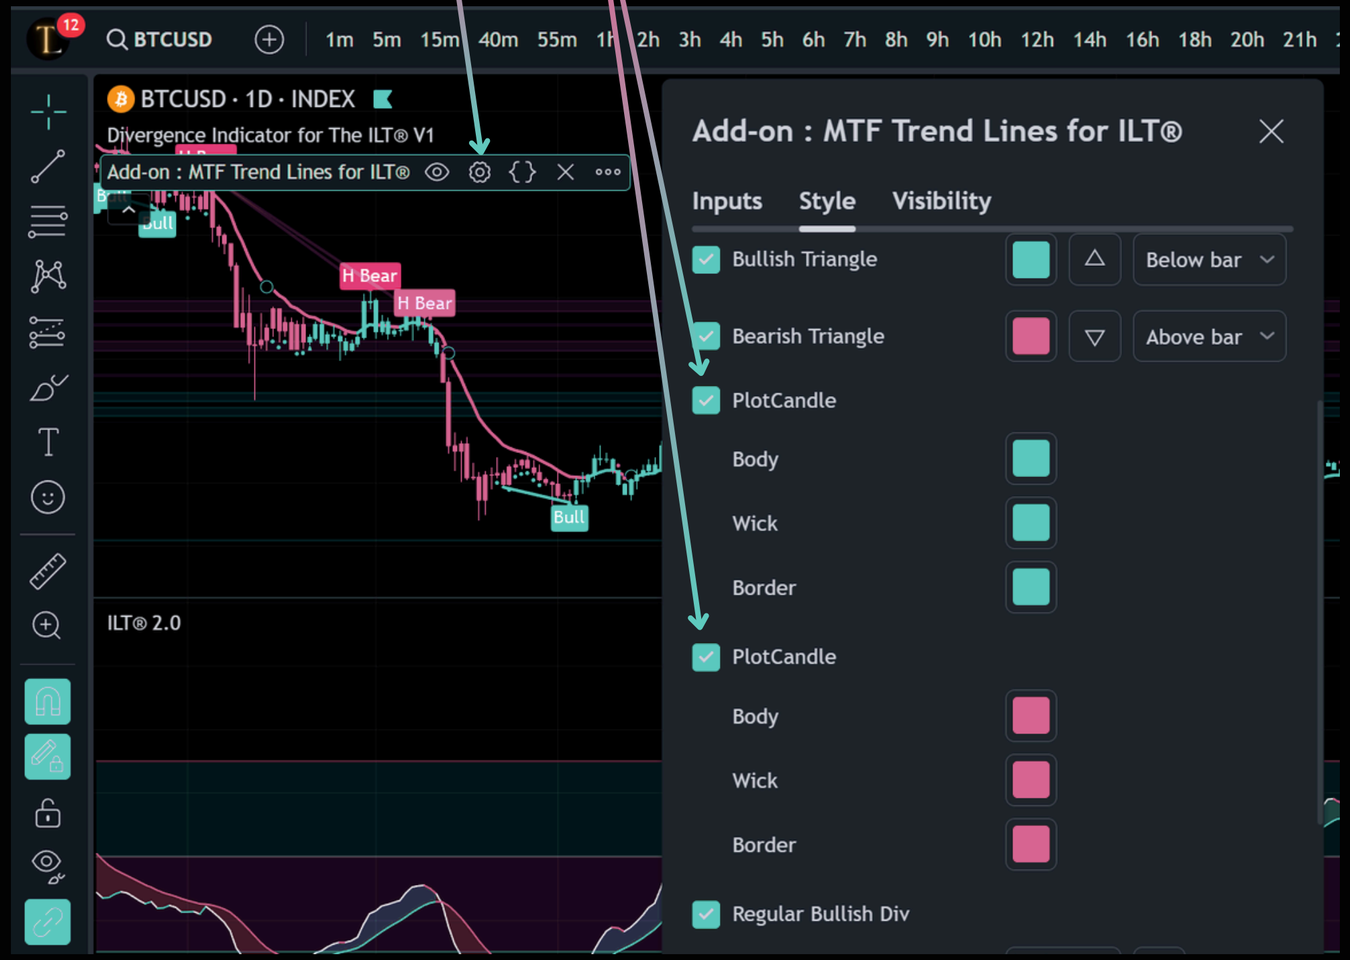

Select *Dark Mode*: Ensure optimal visibility of candles and lines.

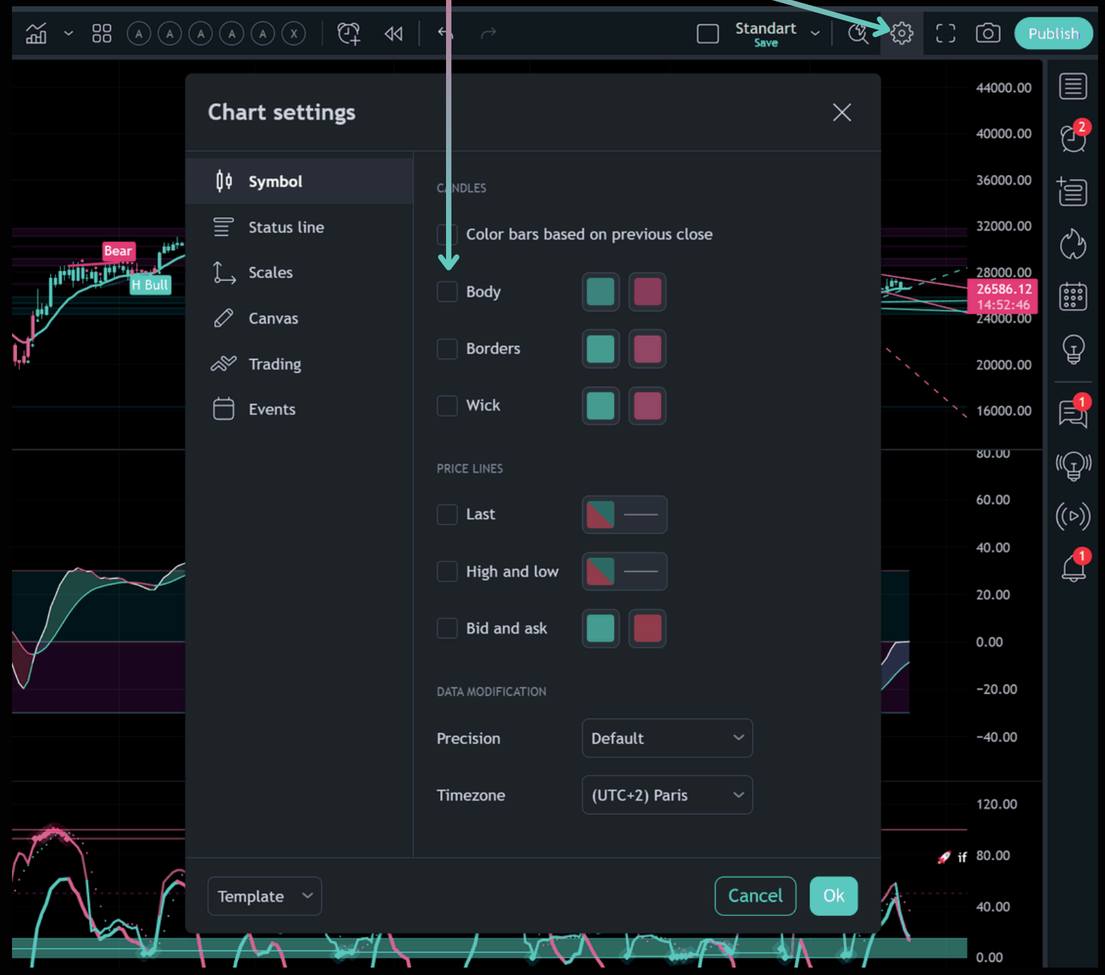

SETUP INSTRUCTIONS

If you wish to get the same bar colors as the colors of the ILT® 2.0 2026.
These 2 boxes (*PlotCandle/PlotCandle*) should be let checked...

...& These 3 boxes (*Body/Borders/Wick*) should be unchecked.

SETUP INSTRUCTIONS

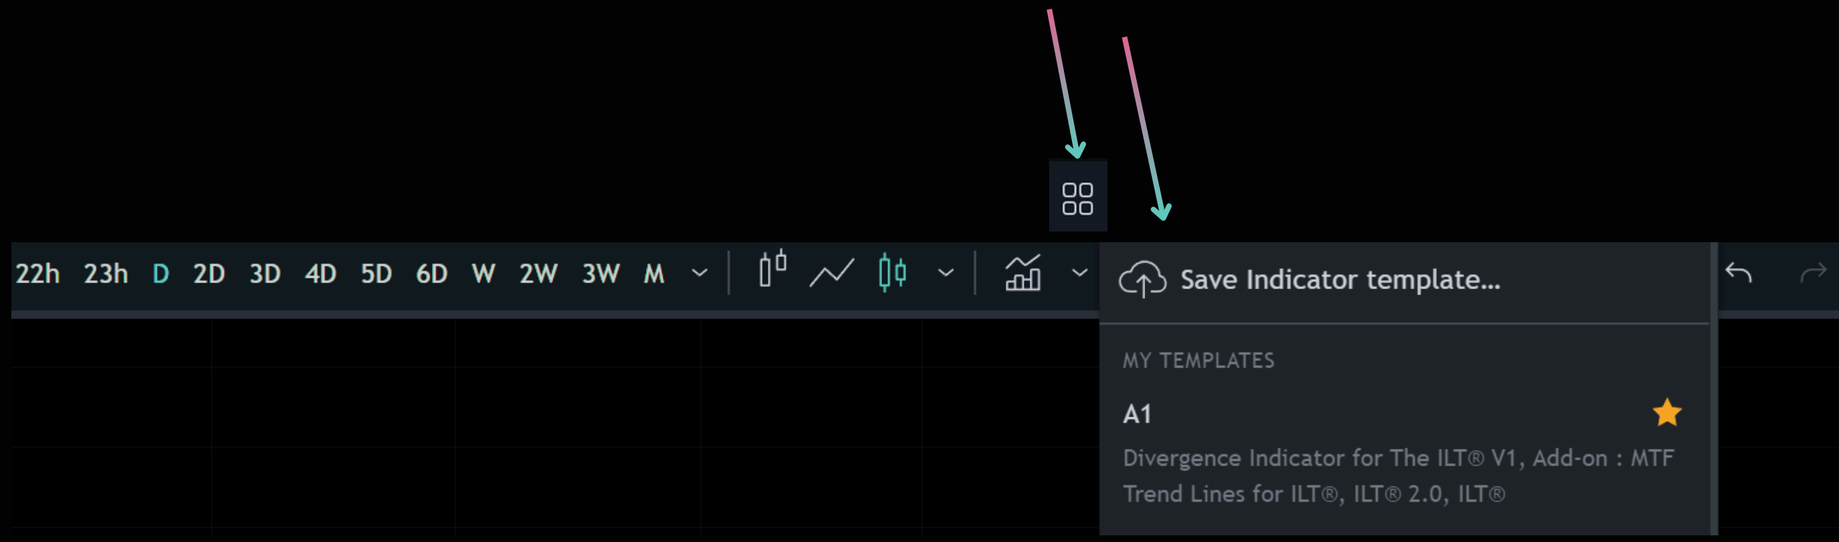

IT WILL APPEAR THIS WAY ONCE EVERYTHING IS SET UP CORRECTLY.

SETUP INSTRUCTIONS

NOW SAVE THIS TEMPLATE WITH ALL THE INDICATORS ADDED.

Saving indicator templates on TradingView boosts analysis efficiency by allowing quick application of predefined indicators and settings, saving time and enabling easy replication across charts.

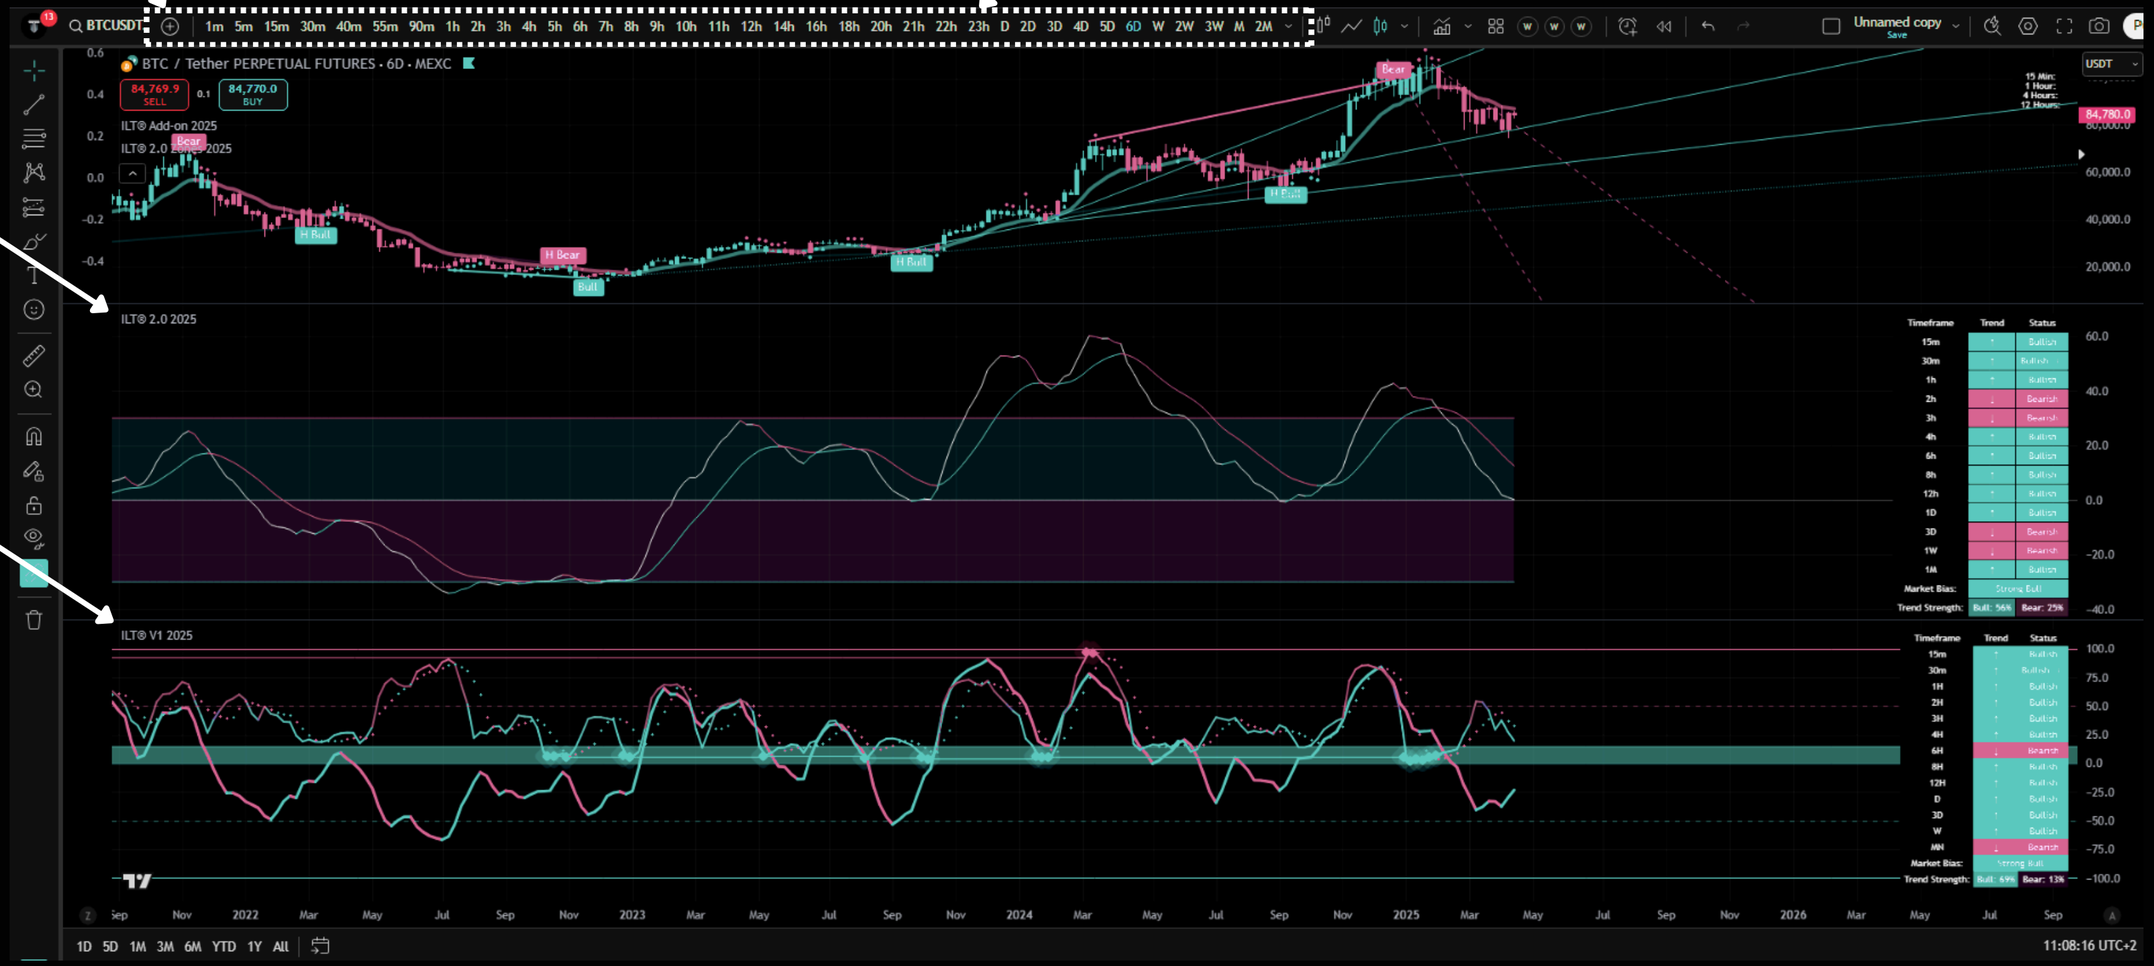

SETUP INSTRUCTIONS

Click here to add new time frames

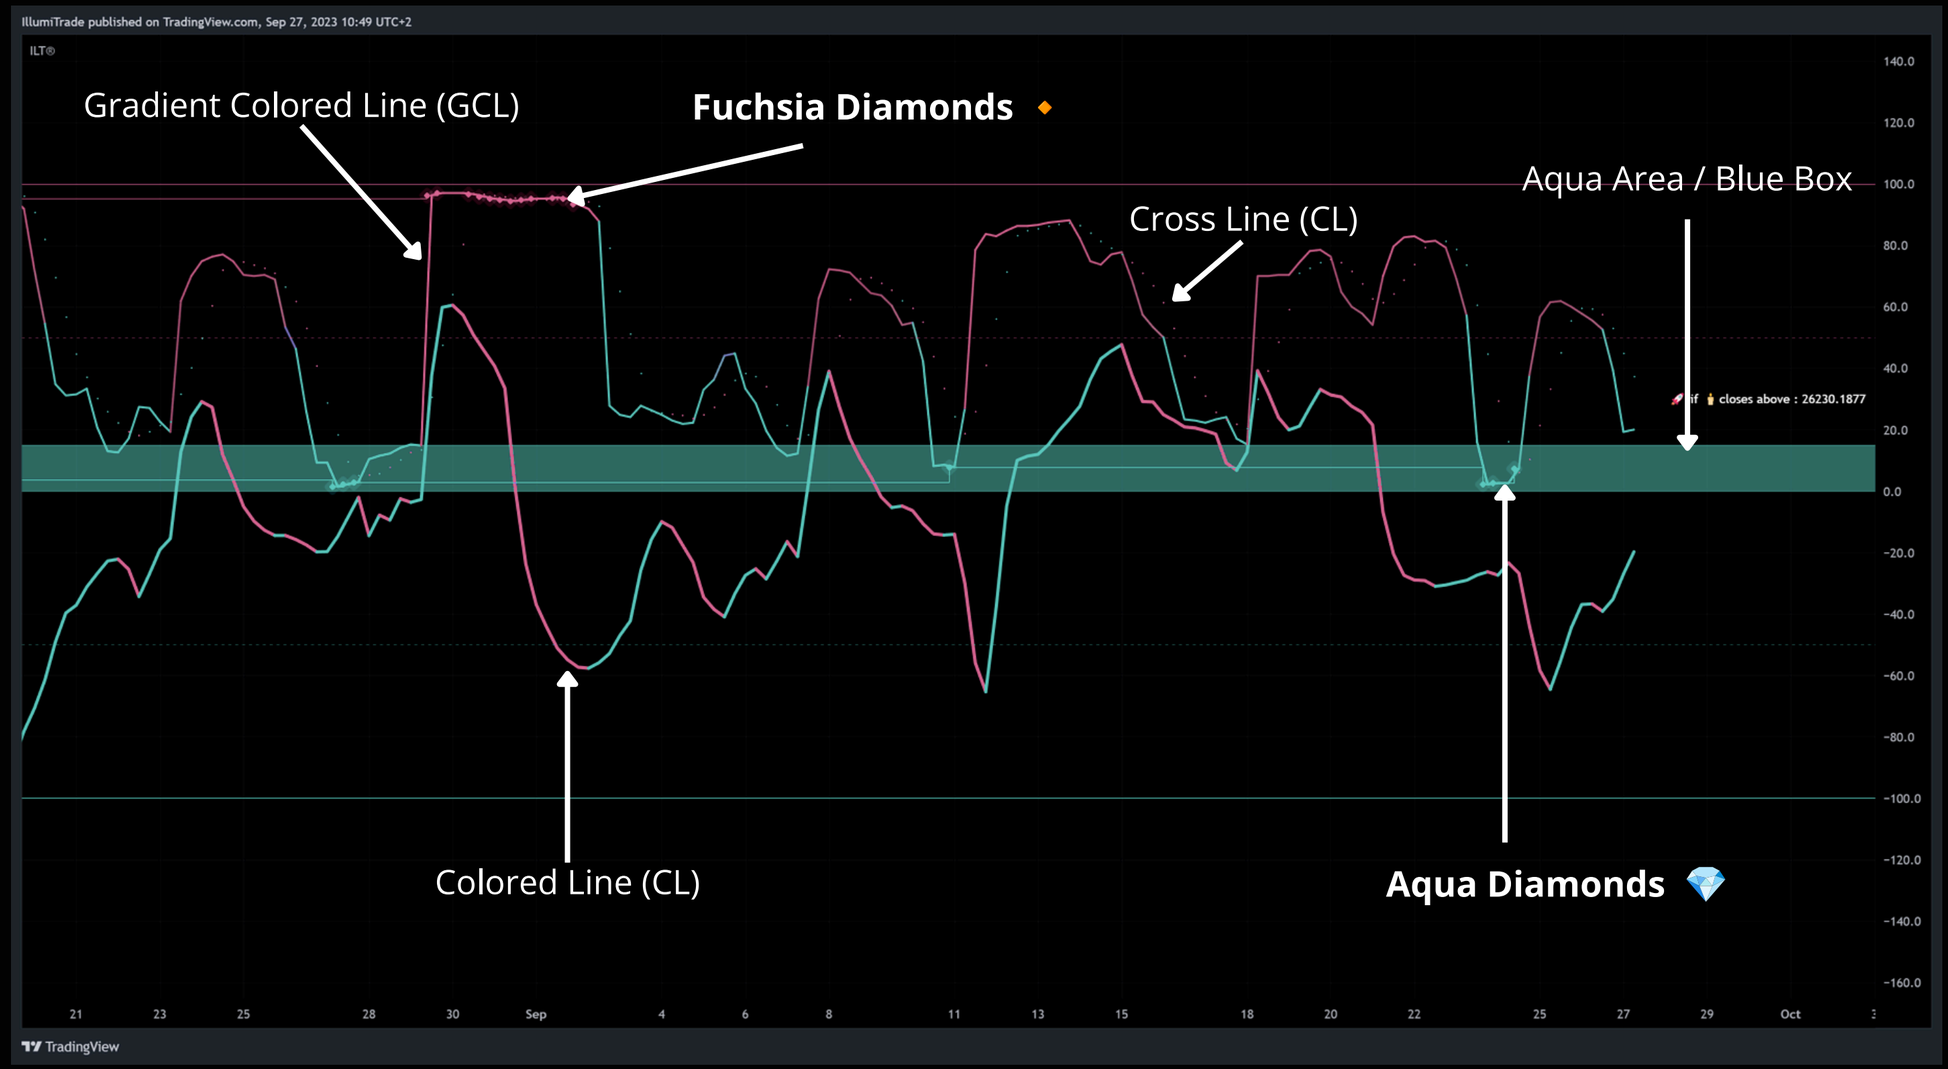

Here is the main template you use and so you can check these time frames quickly so you know exactly what is happening on Multiple Time Frames (MTF).

ILT® Browser Tab Setup – 2026 Edition

Optimized multi-timeframe workspace for the ILT Indicator (V1, 2.0, 2+).
These 7 dedicated tabs give you an **instant snapshot** of the current market state — from ultra-short scalping signals to macro trend alignment — in one seamless flow.

1. **Overview**
→ All Versions (V1 · 2.0 · 2+) • 23H (default)
Quick switch between versions & timeframes + instant big-picture context

2. **Scalp** (**optional**, useful for high leverage trading)
→ ILT 2.0 only • 1m · 5m · 15m
Ultra-precise entries, exits & micro reversals

3. **Entries**
→ ILT 2.0 only • 15m · 1H · 4H
Core tactical sweet spot for high-probability trades

4. **Low Time Frames**
→ ILT V1 + 2.0 • 40m · 55m · 90m
Clean mid-term swing rhythm & structure

5. **Mid Time Frames #1**
→ ILT V1 + 2.0 • 2H · 5H · 10H
Mid-time Frames

6. **Mid Time Frame #2**
→ ILT V1 + 2.0 • 14H · 20H · 23H
Mid-time Frames

7. **High Time Frames #1**
→ ILT V1 + 2.0 • D · 2D · 3D
Higher-timeframe bias & trend

8. **High Time Frames #2**
→ ILT V1 + 2.0 • 5D · 1W · 3W
Higher-timeframe bias & trend

Why multi-timeframe tabs?
They allow **quick visual scanning** of the same asset across different horizons simultaneously.
No switching back and forth = faster decisions, better context, and reduced emotional trading.

Pro Setup Tip ave each as a dedicated **TradingView Layout** (multi-chart grid with ILT indicators pre-loaded on every pane). Pin your 7 layouts — or configure your browser/desktop app to reopen them automatically on launch — for a **zero-friction, instant market overview** every morning.

SETUP INSTRUCTIONS

DIVIDING YOUR SCREEN FOR MULTI TIME FRAMES ANALYSIS:

Tip #1: Save these setups (previous page) to open automatically when you launch your browser. This feature is available on all major browsers. To know how to set this up, just search on google for "Automatically open a set of pages on [your browser]."

Tip #2: Don’t hesitate to explore unconventional time frames when using the first tab with all the indicators. For instance, instead of the 1H, try the 55-minute; instead of the 2H, try the 90min; instead of the 4H, try the 6-hour; instead of the Daily, try the 23-hour; and instead of the Weekly, try the 6-day. There’s a good reason why some of these time frames require a paid plan on TradingView—they can reveal “hidden” setups that might not be immediately visible on more common time frames. While it’s not mandatory, experimenting with these alternatives can provide valuable insights. Give it a try!

SETUP INSTRUCTIONS

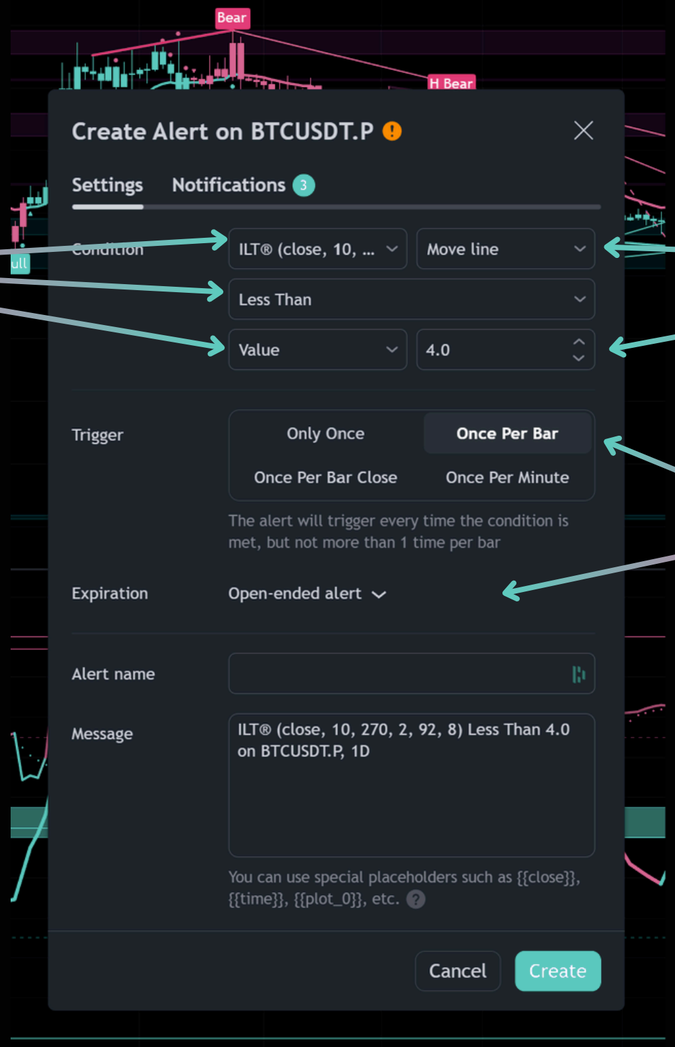

SET UP AN ALERT ON THE ILT® V1 2026 THAT PROVIDES A WARNING BEFORE A SIGNIFICANT EVENT OCCURS? 💎

Right-click on the ILT® V1 2026, then select: "*Add alert on the ILT® V1 2026*"

SETUP INSTRUCTIONS

SET UP AN ALERT ON THE ILT® V1 2026 THAT PROVIDES A WARNING BEFORE A SIGNIFICANT EVENT OCCURS? 💎

Use these settings.

Use these settings.

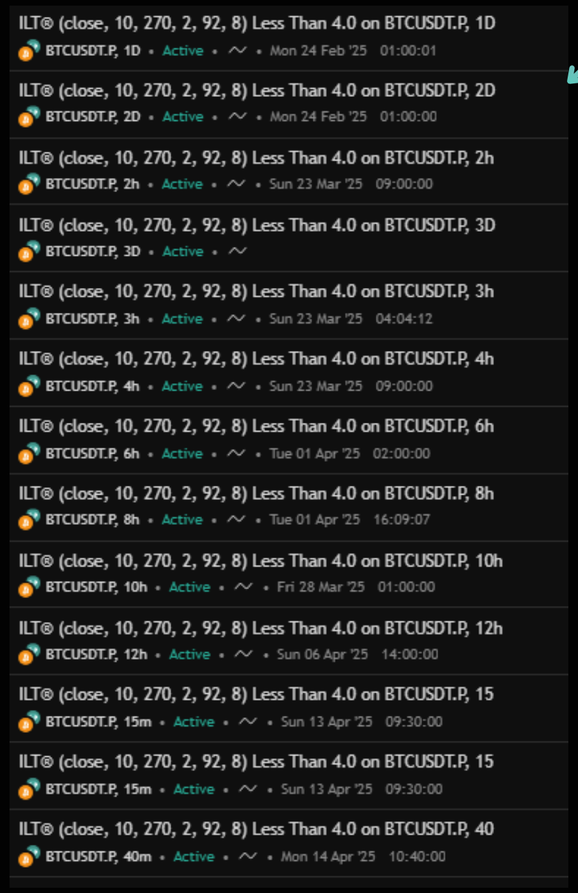

You can set these other settings as you wish.

SETUP INSTRUCTIONS

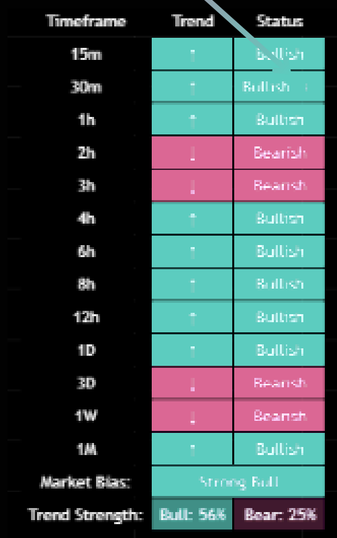

SET UP AN ALERT ON THE ILT® V1 2026 THAT PROVIDES A WARNING BEFORE A SIGNIFICANT EVENT OCCURS?

Set alerts for every time frame and chart you trade. You'll receive an alert whenever Aqua Diamonds appear on the Gradient Colored Line, providing a powerful warning before significant market moves.

Here are the Alerts I set.

Please note, with the Dashboards on the ILT® V1 2026 AND on the ILT® 2.0 2026, you can see these diamond alerts across multiple time frames continuously too.

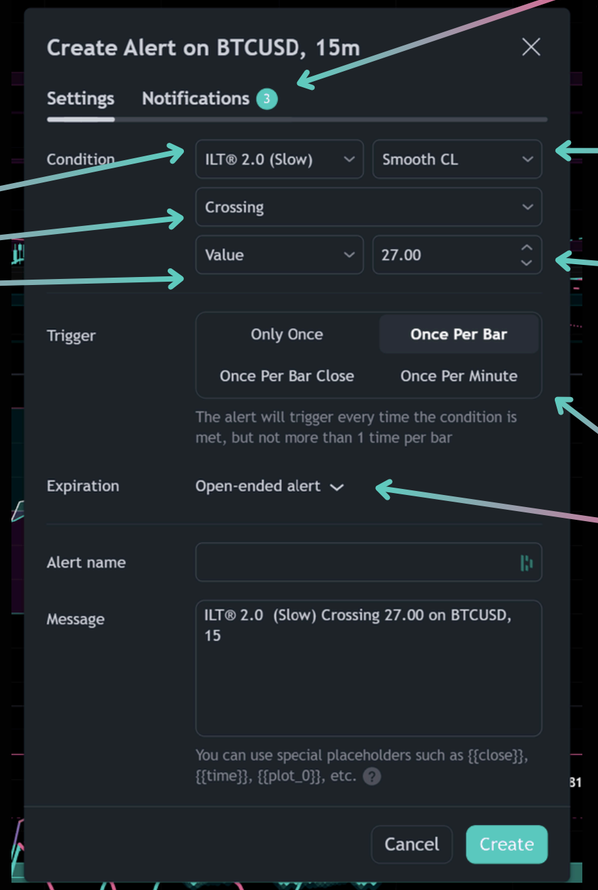

SETUP INSTRUCTIONS

SET UP AN ALERT ON THE ILT® 2.0 2026
THAT PROVIDES A WARNING WHEN THE CL2 ENTERS THE SAFE OR THE RISKY ZONE

Enhancing Your Trading Strategy with Alerts
You can further enhance your trading strategy by setting alerts for each of the specified time frames. To do this, right-click on the indicator and select “Add Alert on ILT® 2.0 2026”
Alert Settings:
Set a Low Value: For example, -27 / -28.5
Set a High Value: For example, 27 / 28.5

I recommend setting these two alerts (high/low values) on the following time frames: 15m, 55m, 1H, 4H, 12H, 23H, Daily, and 2D.

In the Notifications section you can customize your alert as you wish !

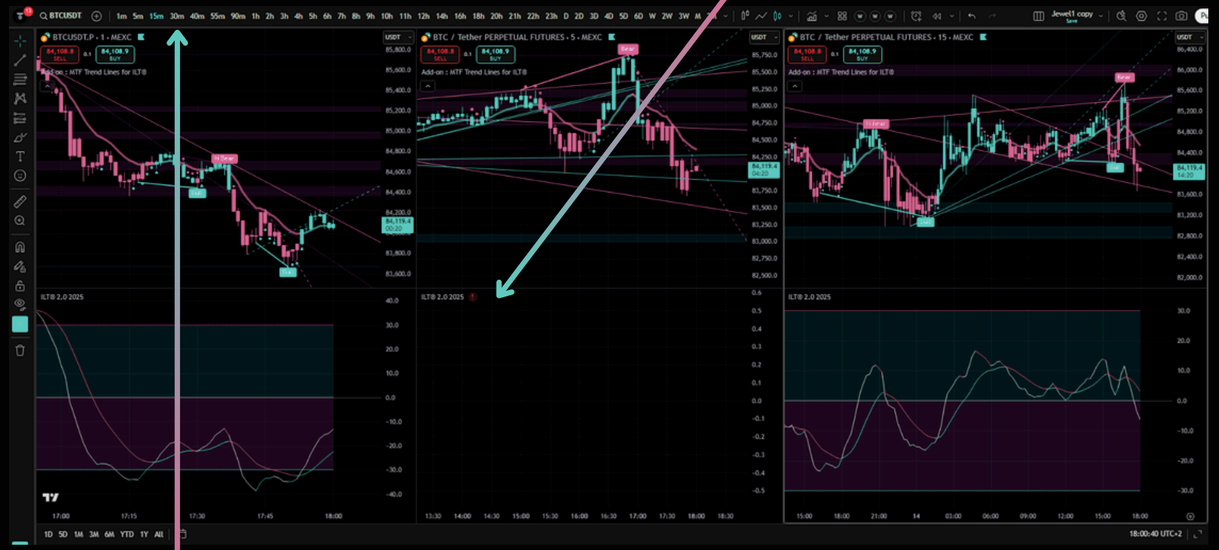

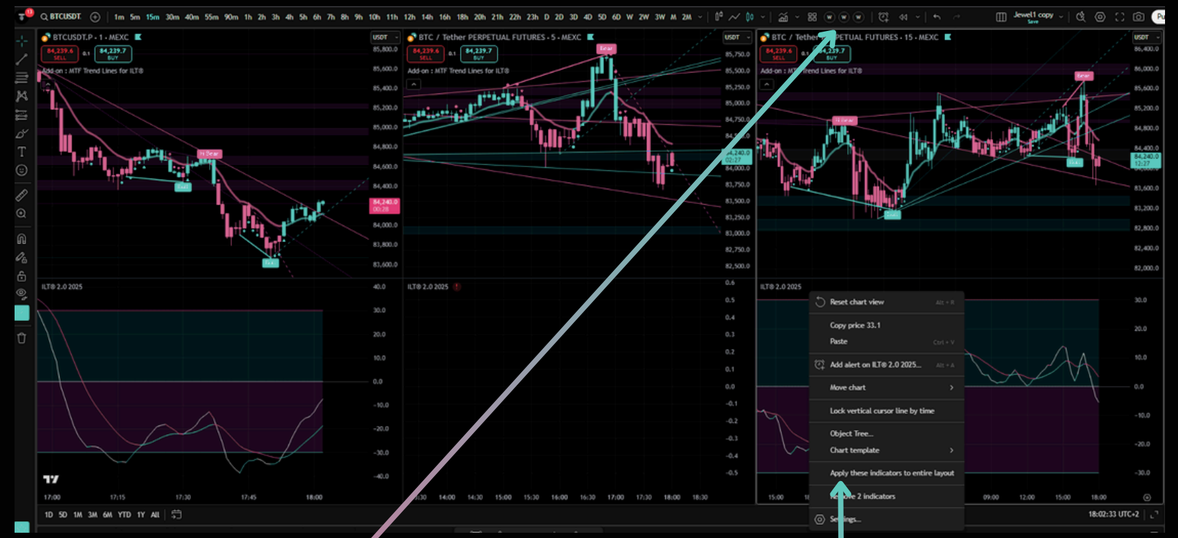

you can set the other options as you wish.

SETUP INSTRUCTIONS

TIPS WHEN YOU SEE LOADING ERRORS.

You may see these types of errors.To solve this quickly?

Method 1: switch to another **time frame** and select the right one again.

Method 2: switch to another **indicator template** and select the right one again.

Method 3: If you're using a TradingView layout with multiple charts, right-click on the chart displaying the ILT indicators, then select "**Apply These Indicators to Entire Layout**" from the menu. This will add the indicators, to all charts in your layout.

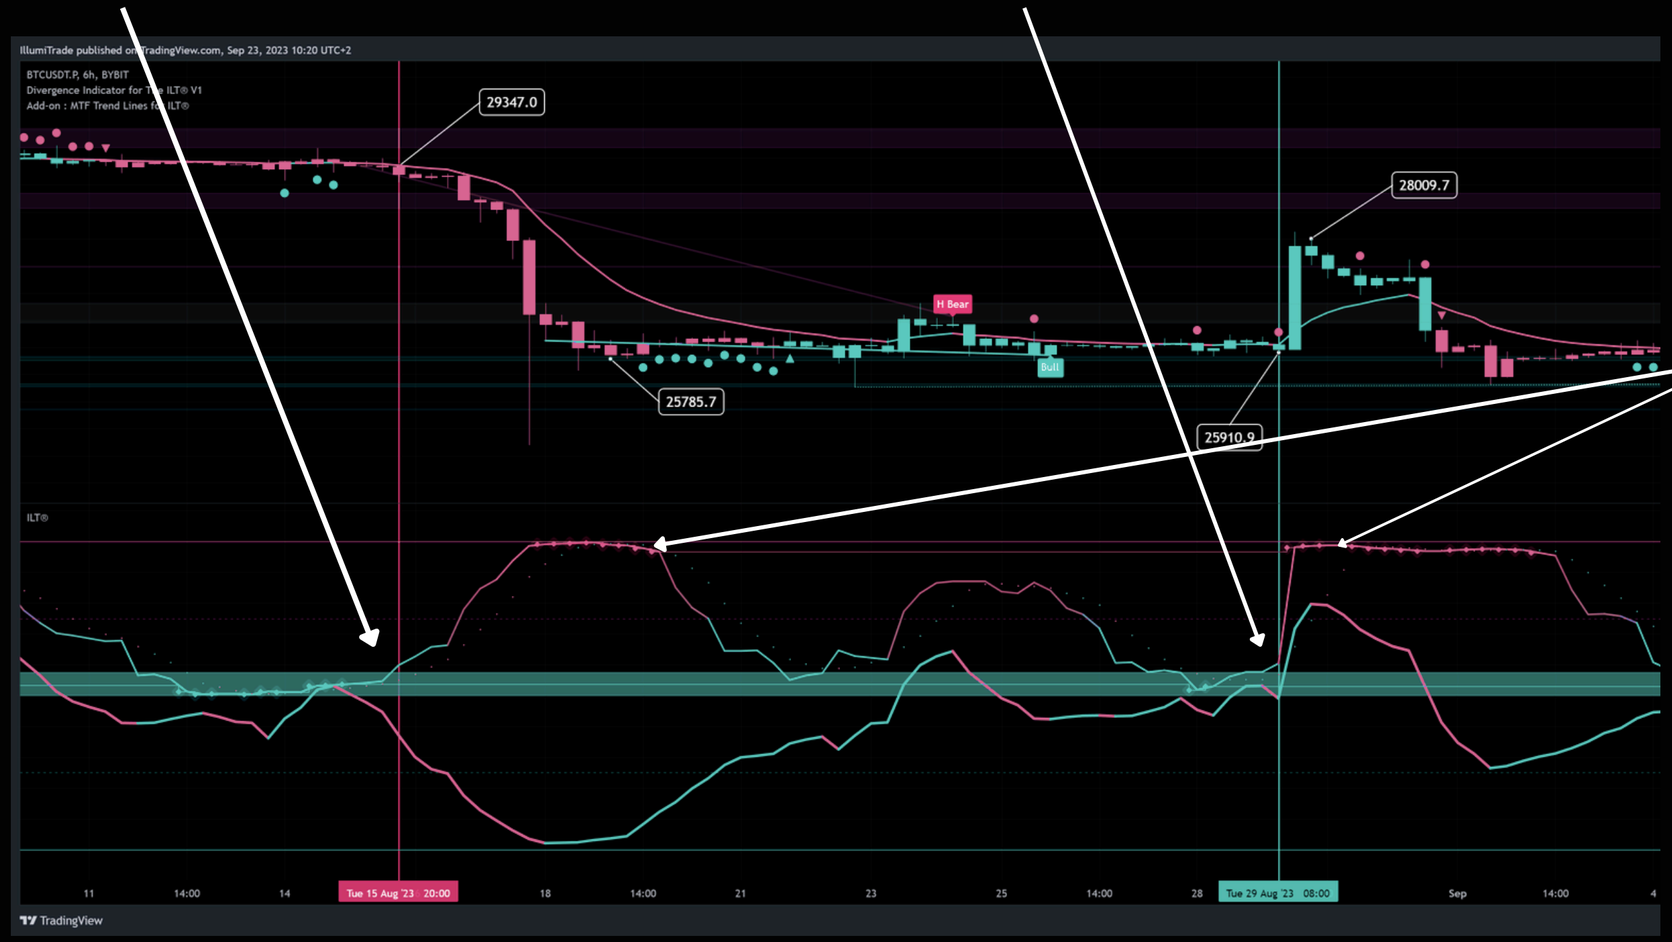

CORE TRADING STRATEGIES : ILT® V1

Conditions to **open** a Position (Short or Long):

- Observe the Gradient Colored Line (GCL); trading typically starts after Aqua Diamonds 💎 appear on the GCL.
- Ensure the GCL has a positive slope and has crossed above the Cross Line.

When these above conditions are met:

Short if the Colored Line is Fuchsia. Long if the Colored Line is Aqua.

Conditions to **Close** a Position:

- Close a Long position if the Colored Line turns Fuchsia.
- Close a Short position if the Colored Line turns Aqua.
- Ensure the GCL is at a high level and about to dip below the Cross Line.
- Optionally, close if Fuchsia Diamonds 🔸 appear on the GCL, indicating exhaustion or a local top/bottom.

ILT® Indicator Signals

Indicator	Signal	Action
Aqua Diamonds 💎	Potential entry	Long/Short setup
Fuchsia Diamonds 🔸	Trend exhaustion	Close position

CORE TRADING STRATEGIES : ILT® V1

HOW TO AVOID A SIDEWAYS MARKET?

⚠️

IMPORTANT : A GCL with a negative slope, especially below the Cross Line, indicates that a local top or bottom has been reached, signaling a sideways phase before a potential reversal or trend continuation once the GCL **resets** (i.e., reaches a low level again).

Regularly evaluate the GCL on higher time frames, as a negative slope can lead to deceptive movements and false signals on lower time frames. Conversely, a positive slope from a low level—ideally within the **Aqua Area/Blue Box** across multiple time frames—suggests an optimal setup for a significant move.

Always check multiple time frames to avoid false signals. For a robust setup, look for the GCL **resetting** (reaching a low level) across as many time frames as possible, seeking similar setups for added confirmation.

CORE TRADING STRATEGIES : ILT® V1

⚠️

Alert Setup:
You have configured alerts on the ILT® V1 2026 so you do not have to check your screen daily.
You receive notifications (and emails) whenever the GCL reaches a low level 💎.
The alerts sets should cover most time frames:
Low Time Frames	15m, 1H, 2H, 3H, 4H
Mid-Time Frames	5H, 6H, 7H, 8H, 9H, 10H, 12H, 18H, 23H, D
High Time Frames	2D, 3D, 4D, 5D, 6D, W
→ As mentioned on the last page, the dashboard allows you to view setups across almost all time frames.

When to Trade:
You open trades when the GCL has reset (reached a low level/near the blue box) on most low/mid-time frames, ideally with Diamond 💎 alerts:
Low Time Frames	15m, 1H, 2H, 3H, 4H
Mid-Time Frames	5H, 6H, 7H, 8H, 9H, 10H, 12H, 18H, 23H, D
High Time Frames	2D, 3D, 4D, 5D, 6D, W

When observing Diamond 💎 alerts across multiple higher time frames, the strength of the anticipated market move increases. Conversely, if the GCL shows a negative slope on most mid to high time frames, it indicates potential market confusion or sideways movement (expect messy moves on lower ones.) In such cases, it's prudent to avoid trading and instead focus on shorter-term trades

Fuchsia diamonds 🔸 on the GCL → signal that the asset is nearing a local top or bottom / exhaustion of the move before the GCL resets again.

CORE TRADING STRATEGIES : ILT® V1

⚠️

Most of the time, when you see alerts on low time frames, the GCL on higher (mid) time frames has reset and reached a low level, indicating a strong, clean move is expected. The move begins when the GCL rises (gets a positive slope) and then exits the blue box.

Important: Once again, Traders often lose money when the GCL has a negative slope on high time frames, as this leads to messy moves on lower time frames. This is when you trade short-term or look for entries for the next big move.

When you see 🔸 on the GCL of high time frames (the higher, the better) or notice the GCL reaching a high level followed by a negative slope, it signals exhaustion and suggests the asset is nearing a local top or bottom.
Observing these conditions on Daily and higher time frames frequently indicates a **significant** top or bottom.
Conversely, if these conditions appear only on low time frames, it merely suggests proximity to a **local** top or bottom.

Ideal Trade Setup: The best time to enter a trade using the ILT® V1 2026 is when alerts are present across almost all time frames.
However, seeing alerts on most low/mid-time frames is usually sufficient, as more alerts typically indicate a stronger setup.

Note: If alerts appear on only one or two low time frames while the GCL on higher time frames has a negative slope, it suggests a potential move on that low time frame. In this case, it's advisable to take profits quickly or find an entry for the next big move.

Summary: What you see on *low time frames* is **weaker**, than what you see on *high time frames*.

CORE TRADING STRATEGIES : ILT® 2.0 2026

CORE TRADING STRATEGIES : ILT® 2.0 2026

Easy Risk Management Strategy

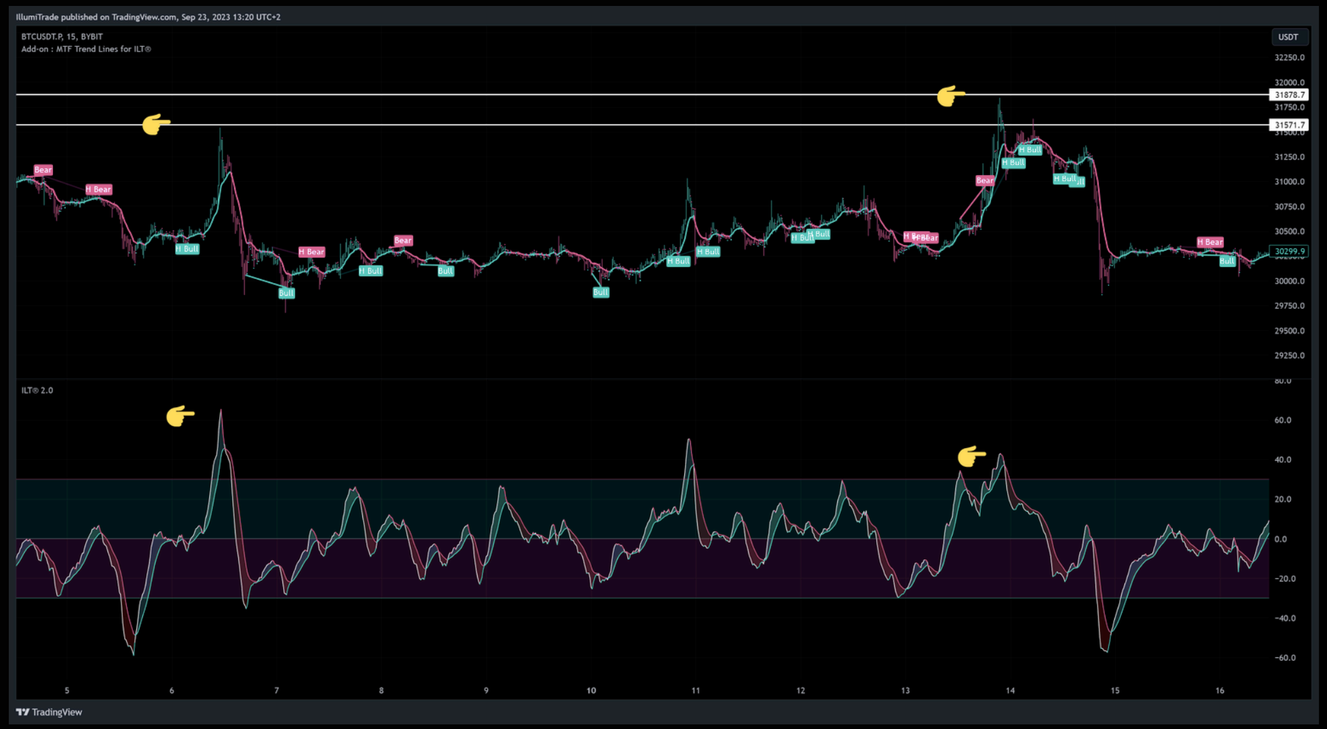

A straightforward risk management strategy involves identifying specific conditions across 3 to 5 time frames.

Steps to Implement the Strategy:

1. **Set Stop Loss**: Once the identified conditions are met, place a stop loss just above the last local top (for a short position) or below the last local bottom (for a long position). Two white lines have been drawn to illustrate the appropriate stop loss placement.
2. **Don't Fear Stop Loss Triggers**: If your stop loss is triggered, don't be discouraged. Repeat this process until the actual move begins.

Alternative Strategy:

Consider accumulating short or long positions each time the 15-minutes/1H/4H charts enters the Risky Zone or the Safe Zone. If you have confirmation from higher time frames and are close to a significant top or bottom, this approach can be particularly effective. This is what we did from 98k to 110k the last time Bitcoin reached a major top.

CORE TRADING STRATEGIES : ILT® 2.0 2026

The **ILT® 2.0 2026** is the latest version, enhancing **ILT® V1 2026** by merging CL and GCL for better trend identification. Its main goal is to distinguish between genuine and false market moves, helping users decide when to trade or hold back. This update allows for easy recognition of fake versus real moves, aiding in informed decisions for long, short, and profit-taking positions.

CL2: This line oscillates between positive and negative values (above or below the 0 line). A positive value indicates a bullish trend, while a negative value indicates a bearish trend.
TL2: This line is a smoothed version of the CL2. It helps eliminate short-term fluctuations, providing a clearer picture of the trend and aiding in identifying the direction and strength of the trend.

- **To Identify Long Opportunities**: Look for a bullish trend, indicated by the CL2 crossing above the TL2 line, with the TL2 ideally remaining above the zero line.
- **To Identify Short Opportunities**: Look for a bearish trend, indicated by the CL2 crossing below the TL2, with the TL2 ideally remaining below the zero line.
- **To Identify Profit-Taking Opportunities**: Watch for a change in trend, indicated by the CL2 crossing back through the TL2 in the opposite direction.

CORE TRADING STRATEGIES : ILT® 2.0 2026

Safe Zone: This refers to a price range where there are more buyers than sellers. In this zone, the security is in demand, suggesting that the price is likely to increase or, at the very least, remain stable.
Risky Zone: Conversely, this refers to a price range where there are more sellers than buyers. In this zone, the security is in low demand, indicating that the price is likely to decline or remain unstable.

CORE TRADING STRATEGIES : ILT® ADD-ON 2026

The **MTF Trend Lines Add-on** enhances technical analysis by identifying crucial support and resistance levels in the market. It automatically adjusts colors, using fuchsia for resistance zones and aqua for support zones. Typically, encountering a resistance zone tends to decrease prices, while a support zone often leads to price increases.
This add-on utilizes solid lines to represent higher-term trend lines and dotted lines for shorter-term trend lines, with fuchsia indicating potential resistance and aqua denoting potential support. Similar to the Supports & Resistances Channel, color signifies the significance of each level.

- **Dots on the Chart**: Indicate whether CL2 is curling up under TL2 or down over TL2. 

- **Triangles**: Signify crossings above or below TL2. 

CORE TRADING STRATEGIES : ILT® 2.0 2026

How to Catch Very Tops & Bottoms with ILT® 2.0
To identify optimal entry points for both short and long positions, I recommend the following approach, focusing primarily on the 15-minute, 55-minute (or 1-hour), and 4-hour intervals. (You can also apply this strategy to shorter time frames, such as 1-minute, 5-minute, and 15-minute charts.)

When the CL2 indicator on these time frames reaches extreme levels:
Risky Zone → Indicates a potential short entry (market top).
Safe Zone → Indicates a potential long entry (market bottom).
At this point, be prepared to take action—but always trade in alignment with the overall trend, which is determined by higher time frames.

Screen Division:
Divide your screen into 3 sections for the following time frames:
→ 15-minute / 55-minute (or 1-hour) / 4-hour
Save this layout for easy access.

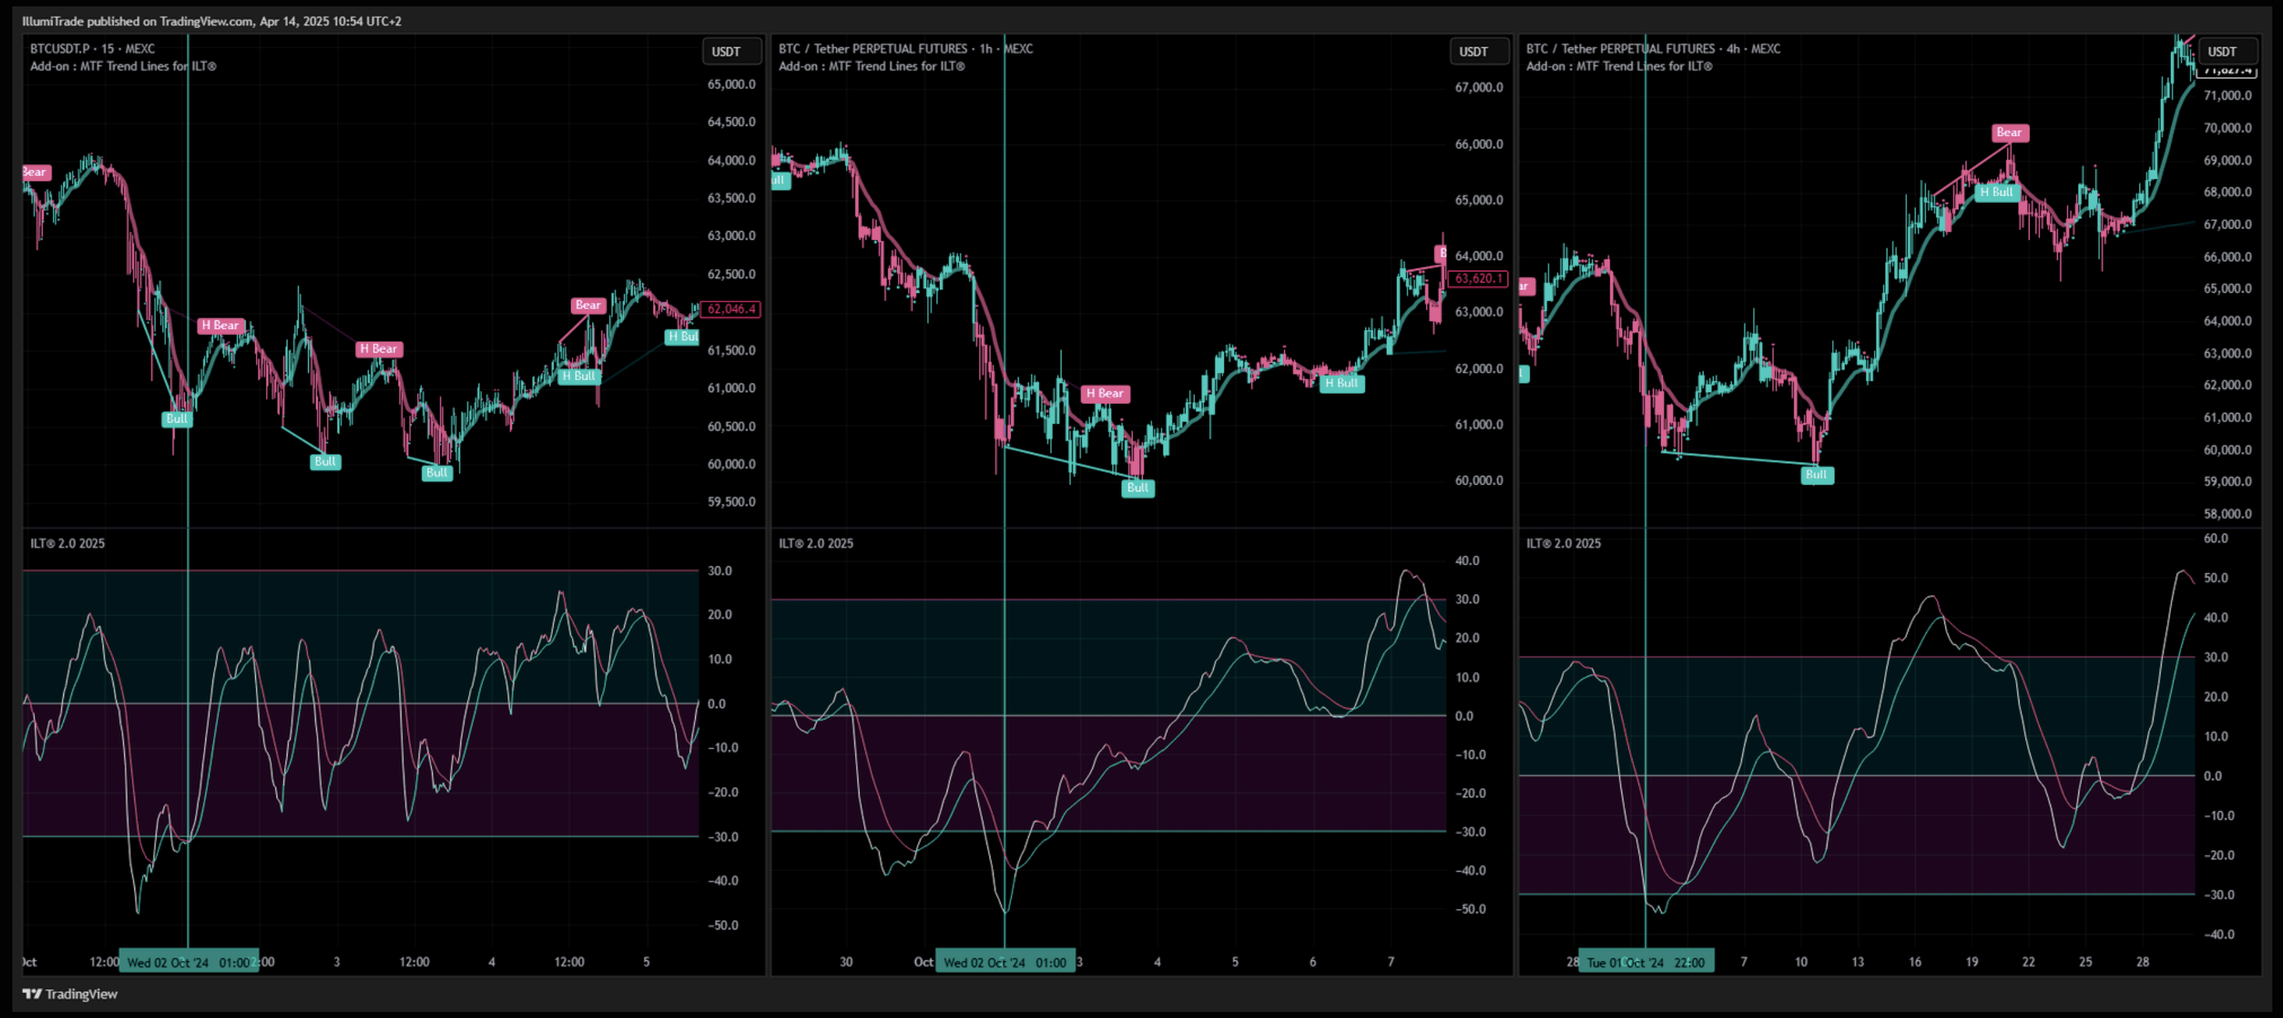

Monitor Higher Time Frames:
Keep an eye on broader time frames like:
→ 4H / 12-hour / Daily *(I also like to check the 2D 3D 4D 5D 6D W)

When higher time frames (4-hour, 12-hour, Daily, and beyond) approach extreme levels (Risky Zone or Safe Zone) and show signs of shifting bullish or bearish—or are already trending in that direction—wait for the CL2 on the lower time frames (15-minute, 1-hour, 4-hour) to get close or to reach these zones.

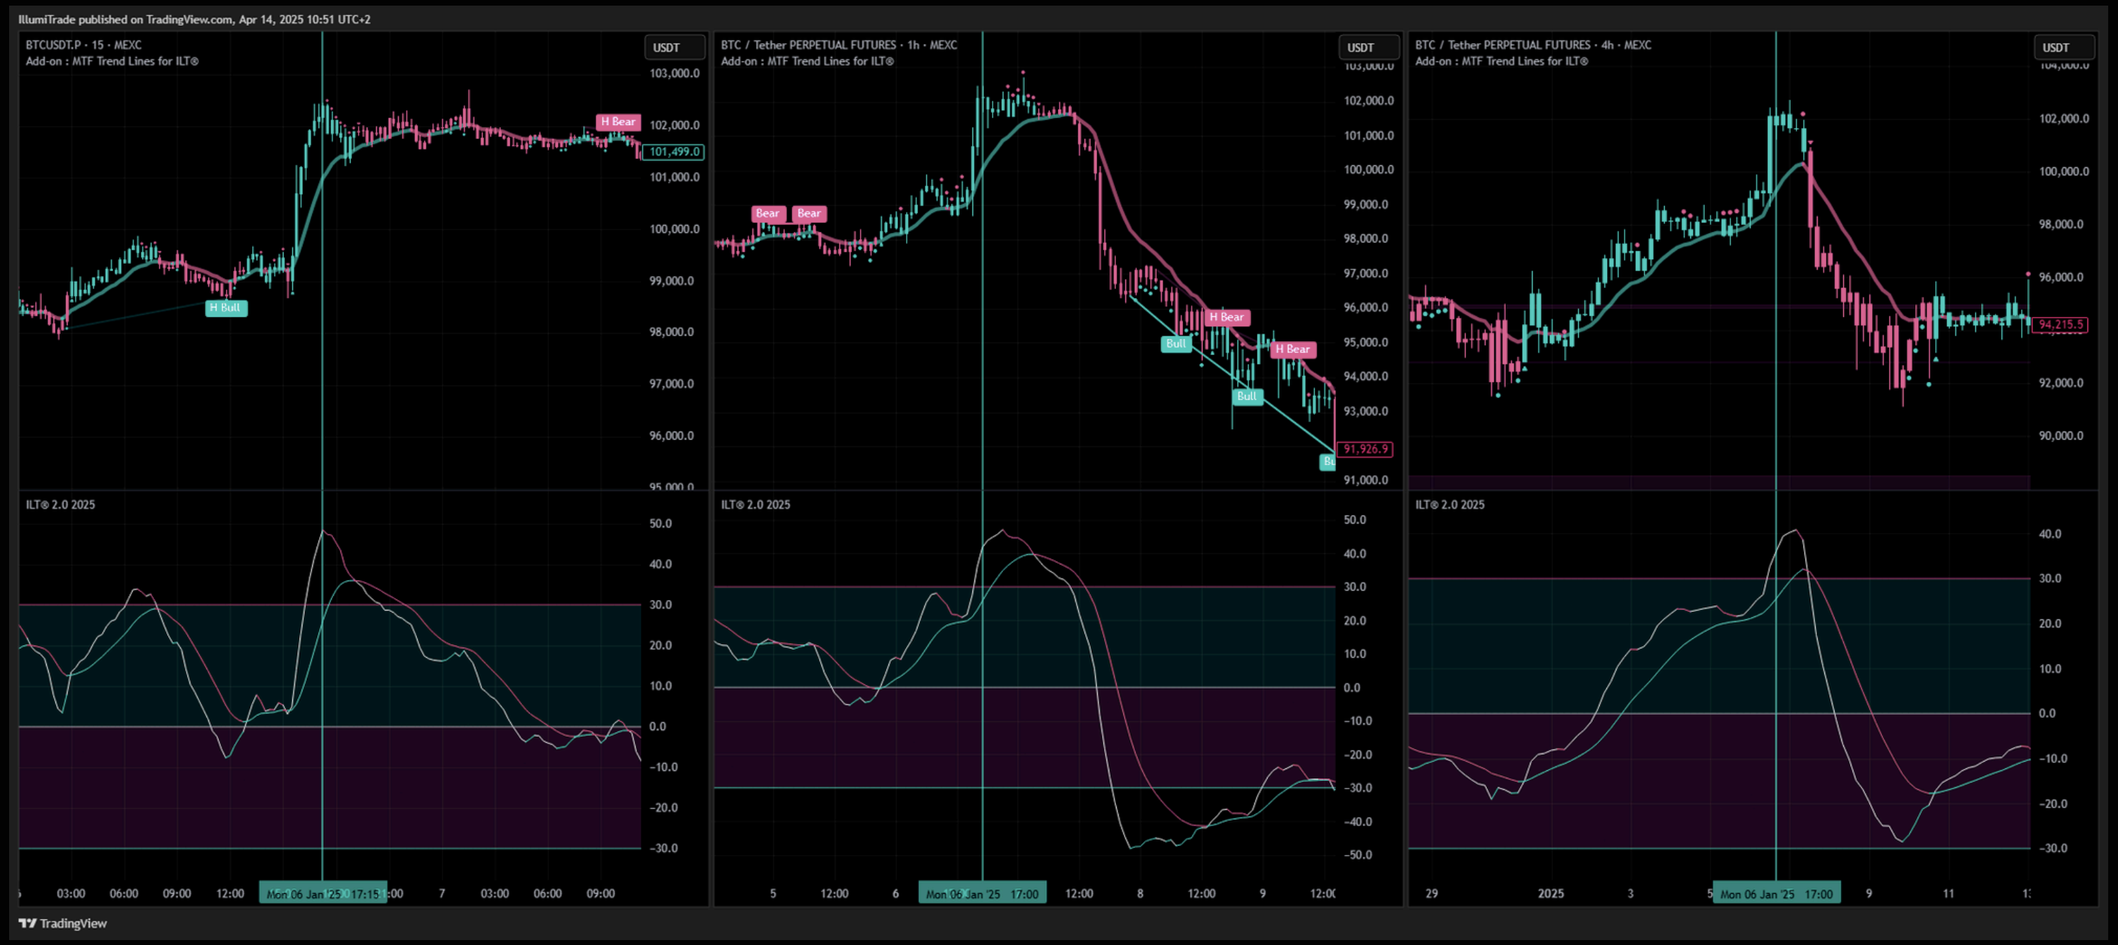

You can use 1-minute / 5-minutes /15-minutes charts for short-term trading or gradual accumulation when adding to your short or long positions.
Additionally, you can also check for any divergences on the ILT 2+ (see the bottom of page 28) on these lower time frames.

Enter a trade when both the higher time frames and the shorter time frames align by being in or near the Risky or Safe Zones.
This increases your chances of catching market tops or bottoms effectively.

CORE TRADING STRATEGIES : ILT® 2.0 2026

CORE TRADING STRATEGIES : ILT® 2.0 2026

CORE TRADING STRATEGIES : ILT® 2.0 2026

"On the ILT 2.0 2026 dashboard, the label changes color to indicate whether the CL2 is in the risky or safe zone on the 15-minute, 1-hour, or 4-hour timeframes.

CORE TRADING STRATEGIES : ILT® 2.0 2026

I. Checking the Trend
First, you need to check the trend. **You want to trade in the same direction as the trend (higher time frames).** This principle also applies to version 1 (ILT® V1 2026).

Key Questions to Ask When Checking the ILT® 2.0 2026 on These Time Frames:

- Is the CL2 in the bullish control zone or the bearish control zone?
- Is it in the risky zone or the safe zone? (When close to these zones, it often indicates proximity to a top or bottom.)
- Is it above or below the TL2? What is the color of the TL2?
    - Is it aqua or fuchsia?

II. Checking Lower Time Frames.
After assessing the higher time frames, check the lower time frames. My favorites are the 23H, Daily, 12H, and 4H.

- **Long Entry**: Look for a long entry when the Daily, 12H, and 4H are in the safe zone, or at least when they are both in the bearish control zone with an aqua CL2, or when the CL2 is above the TL2 on these time frames.
- **Short Entry**: Look for a short entry when the Daily, 12H, and 4H are in the risky zone, or at least when they are both in the bullish control zone with a fuchsia CL2, or when the CL2 is below the TL2 on these time frames.

In some cases, you can find a favorable entry when the CL2 is rejected (bounces) from the risky zone (around 27 / 28.5 on the indicator's scale) or when it is rejected (bounces) from the safe zone (around -28.5 / -27).

STRATEGY OPTIONS: ILT® V1 2026 VS ILT® 2.0 2026

You can choose to use either the ILT® V1 2026 strategy, the ILT® 2.0 2026 strategy, or both!

- **Using the ILT® 2.0 2026 Strategy**: This approach helps you identify very tops and bottoms. You may need to repeat the process a couple of times, but with a tight stop loss, you can open risk-free positions or accumulate short or long positions. Successfully trading at these extremes can lead to significant profits.

- **Using the ILT® V1 2026 Strategy**: While this method may not pinpoint the exact tops and bottoms, it allows you to enter a position after a sideways phase, just before a major move—often close to the extremes.

Ultimately, it's up to you to decide the strategy that best fits your needs. Some users, including myself, find success by combining both strategies. Both approaches yield strong trades.

Supports and Resistances:
For analyzing supports and resistances, the ones on the: 1H / 4H and 3D are among the most important ones.

ILT® 2+ (OPTIONNAL)

You also have access to ILT® 2+, a previous version of ILT®.
This version includes Bearish Control Zones / Bullish Control Zones, and it shows you divergences too.

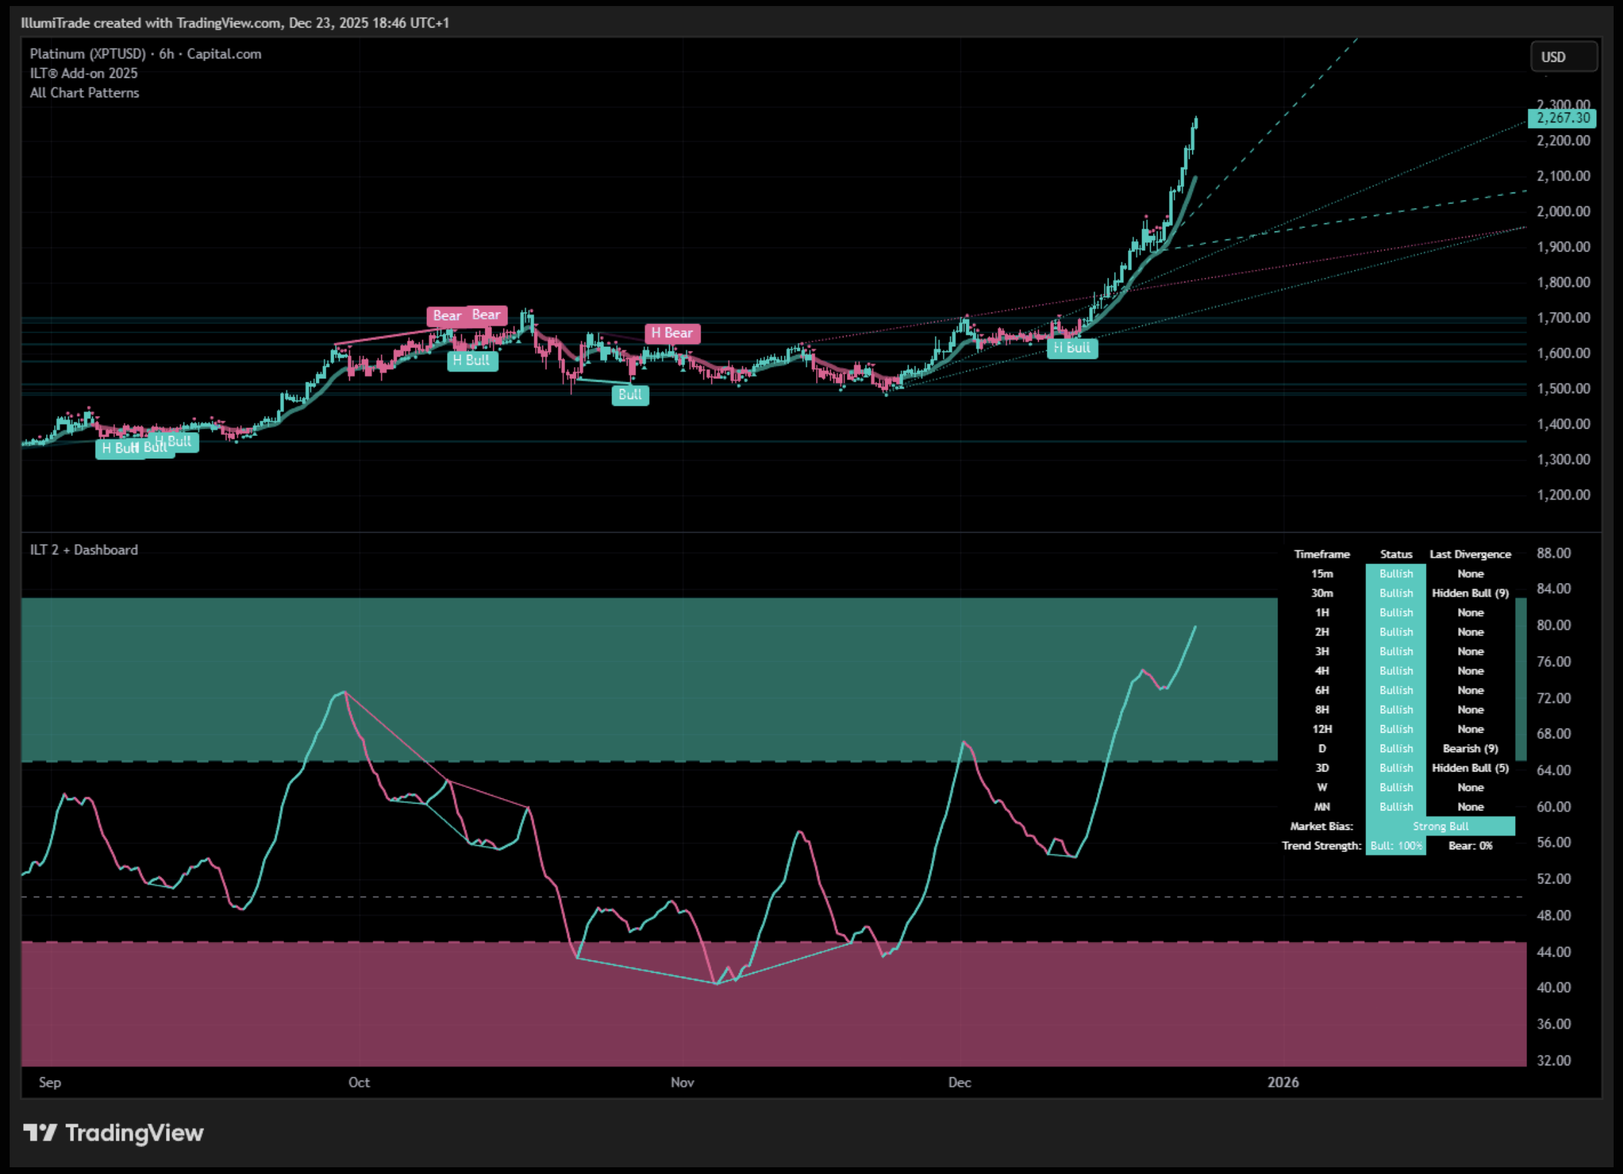

You can use it to find tops and bottoms by checking the divergences on it.
It can still be helpful to find the best entries.

Timeframe	Status	Last Divergence
15m	Bullish	None
30m	Bearish	None
1H	Bearish	None
2H	Bearish	None
3H	Bearish	None
4H	Bearish	Hidden Bear (1)
6H	Bearish	Hidden Bear (1)
8H	Bullish	None
12H	Bullish	None
D	Bullish	None
3D	Bearish	None
W	Bearish	Bearish (5)
MN	Bullish	None
Market Bias:	Bearish	
Trend Strength:	Bull: 38%	Bear: 62%

NEW : You can now see a "Last Divergence" column in the dashboard, showing the most recent divergence (Regular Bullish, Hidden Bullish, Regular Bearish, or Hidden Bearish) detected within the last 10 candles for each timeframe. It also includes how many candles ago it happened (e.g., "Bullish (3)" or "None").

ILT® 2+ (OPTIONNAL)

📡ILT® GCL SCANNER BETA (OPTIONNAL)

ILT® GCL SCANNER BETA (OPTIONNAL)

📡 ILT® GCL Scanner The Big Picture, One Glance : https://www.tradingview.com/pine-screener/

The ILT® GCL Scanner monitors your entire watchlist across 3 higher timeframes (Daily, Weekly, Monthly) to detect Diamond Zones (💎) — **before significant price movements occur.**

Whether you're an investor timing long-term entries, a spot trader catching major swings, or a swing trader looking for higher timeframe confluence — this tool gives you the edge.

No more checking charts one by one. One scan, and you instantly know where the next opportunities are across hundreds of assets simultaneously.

Powered by the TradingView Pine Screener, you can scan any watchlist — Crypto, Stocks, Forex, Commodities, Indices, ETFs, or any custom list you've built.

Filter by New Diamond on Daily, Weekly, and Monthly to surface only the freshest signals.

Add the Diamond Score column to prioritize tickers with multi-timeframe alignment — a score of 2 or 3 means the compression is happening, giving you the highest-conviction setups.

When you spot a 💎 on Weekly + Monthly simultaneously, you've got a high-conviction setup. Set alerts directly from the screener to get notified the moment a new 💎 appears — and never miss a move again.

Included in your ILT membership.

How to set it up (one-time, 2 minutes):

Step 1 — Add the new indicator to your Favorites
1. Click the **Indicators** button (fx) on any chart
2. Search for **ILT® GCL Scanner Beta**
3. Click the ⭐ star to add it to your favorites *(This makes it appear in the Pine Screener indicator list)*

Step 2 — Open Pine Screener
1. Go to https://www.tradingview.com/pine-screener/ in TradingView
2. Click the indicator selector and choose **ILT® GCL Scanner Beta**
3. Select your watchlist

Step 3 — Activate the alert filters
On the right side of the screener, you'll see 3 columns with a bell 🔔 icon:
- **New Diamond** → set to **True** -
New Daily Diamond → set to **True**
New Weekly Diamond → set to **True**

Then Click the Scan button (bottom right) to run the screener_ you now see all the tickers/assets with 💎 on these high time frames.

KEY TIPS FOR MASTERY

Trading Guide Summary: A Focused Approach to Mastery
In the fast-paced trading world, the urge to monitor multiple charts can be overwhelming. However, mastering a single chart or asset can significantly enhance your trading success. Here's a concise summary of key insights from the guide:

Mastering a Single Chart
In-Depth Understanding: Focusing on one chart allows you to grasp patterns and trends, enabling informed decisions and confident opportunity-seizing.
Timeframe Mastery: Analyzing a single chart across various time frames helps identify support, resistance, and potential reversals.
Optimized Decision-Making: Mastery leads to precise predictions and effective risk management.

Enhanced Decision-Making
Concentrating on one chart fosters a disciplined trading approach, filtering out noise and honing in on high-probability setups. Quality over quantity is key—dedicate your energy to mastering one chart to avoid scattered efforts.

Proceed with Caution
Consensus Risks: While consensus can boost confidence, blindly following it can be dangerous. Always question and analyze before joining the consensus.
Independent Mindset: The market doesn't always align with consensus sentiment. Trust your analysis and resist the herd mentality. Users with the best results often avoid social media distractions altogether.

Allocation Strategy
Dedicate 100% of your trading time to indicators across multiple time frames.

Personal Analysis
Trust your own analysis by considering fundamentals and checking indicators across various time frames to enhance decision-making.

Indicator Mastery
Understanding the conditions outlined in the indicator guide is essential. Apply this knowledge to real-time scenarios, particularly around tops and bottoms on your preferred asset charts, to refine your decision-making skills. Transforming this knowledge into instinctive responses fosters a systematic trading approach.

Trading Wisdom: Less is More
Success in trading doesn't require daily activity. The guide emphasizes that not every day offers optimal conditions. Fewer trades can reduce risk and stress while increasing the potential for larger profits by focusing on significant market moves.

Summary
By prioritizing focus, exercising caution, and mastering indicators, traders can unlock their full potential, navigate market complexities, and make informed decisions for sustainable profitability.

ESSENTIAL CONCEPTS SUMMARY

ILT® 2025 GUIDE - QUICK REFERENCE

ILT® V1 2025

Key Components:

- GCL (Gradient Colored Line) - Main line
- CL (Colored Line) - Trade direction
- Cross Line - Reference level
- Aqua Area / Blue Box - Reset zone

Signals:

💎Aqua Diamonds = Potential entry
♦️Fuchsia Diamonds = Exhaustion/Top/Bottom

Entry Rules:

1. Wait for💎on the GCL
2. GCL with positive slope
3. GCL above the Cross Line

→ LONG if CL = Aqua
→ SHORT if CL = Fuchsia

⚠ Avoiding Sideways Markets:

GCL negative slope on HTF = Confusion
Wait for GCL reset across multiple TFs

ILT® 2.0 2025

Key Components:

- CL2 - Oscillating line (bull/bear)
- TL2 - Smoothed version of CL2
- 0 Line - Bull/bear separator
- Risky Zone (top) / Safe Zone (bottom)

Critical Zones:

Risky Zone (>27) = Potential top → SHORT
Safe Zone (<-27) = Potential bottom → LONG

Trade Signals:

LONG: CL2 crosses above TL2
SHORT: CL2 crosses below TL2
EXIT: CL2 recrosses TL2 opposite direction

Catching Tops & Bottoms (15m/1H/4H):

1. HTF in extreme zone
2. Wait for LTF in same zone
3. Enter when aligned

GOLDEN RULES

Multi-Timeframe (MTF):

- Always trade with the HTF trend
- LTF: 15m, 1H, 2H, 3H, 4H
- MTF: 5H-12H, 18H, 23H, D
- HTF: 2D, 3D, 4D, 5D, 6D, W
- More alerts = Stronger setup

Risk Management:

- Stop Loss above last top (short)
- Stop Loss below last bottom (long)
- Accumulate in extreme zones
- Don't fear triggered SLs

⚠ Avoid:

- GCL negative slope on HTF
- Trading against the trend
- Blindly following consensus
- Too many trades = More risk

Recommended Alerts:

V1: GCL < 8 (Aqua💎)
2.0: CL2 crossing ±27/28.5

ADD-ON 2025: MTF Trend Lines (Automatic Support/Resistance)
ILT® 2+: Divergences + Bullish/Bearish Control Zones + Dashboard with Last Divergence
GCL SCANNER: 8 assets × 5 HTF (W, 2W, 3W, M, 2M) - Detects💎before major moves

KEY PRINCIPLE: What you see on LTF is WEAKER than what you see on HTF.

💎on HTF = Major move expected | ♦️on HTF = Significant top/bottom | Fewer trades = Less risk + More potential profits

All rights reserved 2025 ILT®

ILT

All rights reserved 2026 ILT®
